

Antimicrobial activity of organic total extracts of three Kenyan medicinal plants

Matu, Esther N; Kirira, Peter G; Kigonde, Elizabeth V M; Moindi, Enoch; Amugune, Beatrice

Abstract:

Traditional healers have used plants to prevent or treat infectious diseases since time immemorial. Natural products of plant origin are therefore a potential source of novel antimicrobial agents. These results partially support the reported traditional medicinal use of these plants and shows that they are potential sources of new antimicrobial agents
