belief that the financial situation is easing and that the country has now weathered the worst of tha storm is prevalent in Germany. This is largely due to the decision by the Bank of International Settlements to assist the Reichabank in every way in its power.

is confidently suggested in financial quarters that the Bank, in conjunction with Wall Street, will grant Germany a credit of £60,000,000.

the same time the latest news from London indi-cates a sensational fluctuation in the Reichsmark, but the rate of exchange now stands at about 20.20.

easures have been taken in Germany to prevent a "run" on the banks and foreign money is not be-ing sold in some cases, whilst client's cheques are only being cashed up to a certain amount.

was held by the Council that when a tenant de-faulted, the owner should pay. The case for a ruling was brought against Dr. Ribeiro.

That contention is still undisputed but two Appeal Court judges have found that the Council did not comply with the law which lays down that notice shall be served upon the owner immediately on the expiry of six weeks after the charges become due. The third judge upheld the Council.

The unsatisfactory wording of the law was also criticised.

The curious position arises that whereas two judges of the Kenya Supreme Court, one Judge of the Court of Appeal and the Resident Magistrate of Nairobi upheld the Council, two judges, of the Appeal Court have decided to the contrary.

MACHINERY TESTS MOTOR

Actual road testing of motor car tyres and tubes is recognised by some samafacturers as the ideal method of determining quality of the product, but to determine in a short time the maximum service a tyre and tube will deliver, it is neces-sary to conduct laboratory tests that simulate road wear and abuse.

The B.F. Goodrich Company of Akron, Ohio, U.S.A. uses spe-cial machinery to test tyres and tubes within the factory.

A battery of testing machines that produce tyre wear and con-stant flexing of the case at speeds and loadings simulating and exceeding actual road ser-vice, constitutes one of these in-door tests.

The inflated tyre is mounted on a wheel and adjusted against a revolving drum. Any desired load may be placed on the tyre and the contact drum may be re-volved at various speeds.

ed the absolute qualities of tyres for experts examine the easings for failures and calculate the actual road mileage represented by the machine run. If any part 'af 'the tyre shows premature' failure, the cause may be im-mediately determined, changes made and similar tests made on the new and improved product.
