The transportation services operated by the Kenya and Uganda Railways and Harbours and the Tanganyika Railways and Harbours comprise railways, harbours, lake and river steamer, and road motor services.

The two systems serve the internal needs of Kenya, Uganda and Tanganyika, whose development they have had an important part and provide links with the Sudan and British Congo.

During the year operations under conditions of great difficulty, the railways carried out the vital task of transporting military supplies and personnel for major campaigns as well as continuing to meet the internal transport needs of East Africa.

Now, despite an acute shortage of rolling stock and equipment, the railways are carrying more traffic than ever before. Perhaps the chief achievements in the economic program in East Africa, they are playing an important part in bringing about a gradual return to post-war conditions.

MATTERS OF MOMENT

MR. G. C. TURNER'S RECENT ADDRESS on African education, from which we publish further extracts in this issue, is full of sound sense enlivened by humour, and it deserves to be closely studied both in the Colonial Office and by African Governments. An important comment which he makes is the difference in the relative status of teachers and administrators in Great Britain and in Africa—and who is better fitted to make such a comment than a distinguished teacher who gave up the headship of one English public school to become Principal of Makerere College, Uganda, and has now assumed the headship of another great English public school? In Great Britain the teacher is still recognized as the main element in education, and the administrator's duty is to lay the basis for the teacher's work. There have, indeed, been encroachments by bureaucracy on the independence of the teaching profession. Like the early apostles, teachers have found themselves increasingly obliged to "serve tables" and the examination policy of the Ministry of Education has threatened to undermine the standards of the schools. Nevertheless, it is still true that in public esteem the schoolmaster of Great Britain is honoured above the civil servant in the

Ministry, or the local education officer; and, more important still, it is recognized that the civil servant and the local education officer exist to provide the conditions under which the teacher can carry out his work. It is not claimed that the teacher's duty is merely to carry out instructions received from authority. In Africa, as Mr. Turner so well shows, greater esteem attaches to the administrator than to the teacher. The central Government and its representatives have immense prestige and their visits to schools are like those of a *deus ex machina*. The teachers are in danger of falling into the station of ushers, which was their lot in earlier ages in England. It is not possible to remedy such a difference in relative status overnight, but if education is not to suffer it is certainly necessary to raise the esteem in which teachers are held, and Mr. Turner has an excellent suggestion. He welcomes the fact that members of Education Departments sometimes fill posts in African schools; he would like to see this practice extended, and he wants the rules of departmental promotion arranged so that no one suffers in his career from such a practice. Practical acquaintance with teaching can only

general administrators when they return to their offices.

Another point which Mr. Turner raises is even more fundamental. He questions the value of transplanting to Africa an English boarding school education designed for an entirely different set of social conditions. Dr. Arnold's type of "snobbish" school education, he points out, was designed in the context of the English middle-class home, and would have been meaningless out of that context. Hence the emphasis in an English public school education on the training of leaders. But the English middle-class home does not exist in Africa, and officials who go through the African secondary schools are exhorted to become leaders; the results may not be satisfactory. Unfortunately, as Mr. Turner recognizes, any attempt to design an African education suitable for Africa's social conditions is likely to meet with suspicion; for Africans tend to regard a European education as being the secret of European success, and they would have to be convinced that an African education can equally be the secret of African success.

MR. MICHAEL DOOL made all ingenious attempts in the recent debate in the House of Commons reported in this issue, to reconcile Imperialism with Socialism by means of bulk purchase. It is easy to point to instances where bulk purchasing is an advantage to Colonial producers, and naturally such producers do not want to see the system abandoned. But the question cannot be settled by picking instances favourable or unfavourable; the general effects must be considered. When there is a buyer's market, bulk purchase enables a buyer to strike the hard bargain. When there is a seller's market, bulk selling, which is the inevitable corollary of bulk buying, enables the seller to strike the hard bargain. Great Britain has so far benefited in some cases, and lost in others. As for those which opinion in the Colonies is very sensitive, it is whether the world price is being paid for their products or something below the world price. This shows the dangers that may arise when the Government takes to trading. Simple commercial questions then become a cause of friction between nations. Moreover, these bulk arrangements tend to ossify the market, and by killing the spirit of competitive effort, they do infinite harm, which will not be realized until it is too late.

THE NOTE OF CAUTION with regard to the possibility of developing Africa by American capital, which was sounded in these columns last week, has been reiterated by Dr. Paul Einzig in a valuable article in the *Financial Times*, which we reproduce on another page. Dr. Einzig deprecates the catch-phrase of "developing Africa into a second Argentina," and he points out that Africa is not short of cattle but grossly overstocked with them in many areas. The real problem, as he well realizes, is psychological. It is the need to persuade Africans not to regard head of cattle (irrespective of the meat behind the head) as currency or capital. Only when Africans have come to have faith in coins and banknotes will it be possible to develop a real livestock industry in the continent, and arrest the soil erosion which accompanies the present outlook. This goes to prove that every economic advance needs to be accompanied by social and educational advances, though it is equally true that there can be no social and educational, or even political, advance without a concurrent increase in the wealth of the African continent.

U.S. Private Investment in the Colonies

Views of Marshall Plan Administrators

INCREASED DEVELOPMENT OF COLONIAL TERRITORIES by the European countries receiving Marshall Aid should be vigorously undertaken. This was one of the points stressed by Mr. Paul Hoffman, E.C.A. Administrator, when on Tuesday he addressed a joint session of the Senate and House of Representatives' Foreign Affairs Committee in Washington, and laid down a six-point programme of "major adjustments" for Europe.

At the same session, Mr. Averell Harriman, Marshall Aid Ambassador-at-Large, said that he was increasingly impressed by the importance of developing the dependent overseas territories of countries participating in the European Recovery Plan. New and stable cycles of trade and investment might emerge from the development of raw materials in those territories and the encouragement of private American investment to assist those ends.

A plan of that nature would not only make possible the desired increase in America's stocks of reserves of raw materials, but would also have an even wider significance since there was an increasing need to assure future sources of supply for the American industry.

As American industry continues to increase, the volume of raw materials needed from foreign sources will grow larger, the demand of overseas territories now produce many of these materials, and their potential production is far greater.

A comprehensive and co-ordinated effort along these lines would help carry forward the progressive development of these territories in accordance with the principles of the United Nations Charter. To realize the economic potential of these areas, it will be necessary to plan and carry out programmes of public health, sanitation, insect and pest control, to make topographic and geological surveys, and to develop systems of transport, communication, and power.

International Trypanosomiasis Conference Opens

His Grace Jones stresses Need For Free Exchange of Views

THE CONFERENCE of the International Scientific Committee for Trypanosomiasis was opened in London on Tuesday by the Secretary of State for the Colonies, Mr. A. Creech Jones.

The committee was formed as a result of the international conference of 40 scientists held at Brazzaville, French Equatorial Africa, in February, 1949, and comprises scientists from the United Kingdom and Colonies, France, Belgium, Portugal, Southern Rhodesia, South Africa, and the Colonies. The Colonial Office is the committee's permanent nucleus.

World-wide attention has been focused on the conference because of the recent announcement of the discovery in the laboratories of I.C.T. of an effective drug which is believed to cure and prevent trypanosomiasis, the disease communicated by the tsetse fly. The experiments with this drug are expected to be reported to the committee to all its member States. The I.C.T. team will attend to answer questions. Reports are also to be given of two new drugs, as yet in an experimental stage, for combating sleeping sickness in Indians.

Secretary of State's address

The delegates represent the veterinary, medical, and entomological branches of the research, and among them are Mr. J. K. Chowdhry, Sr. G. P. Ross and Mr. P. S. Lawrence (Southern Rhodesia), Mr. J. T. R. Evans (Sudan), and Professor E. A. Buxton, Professor W. H. Peitz and Dr. J. Carmichael (United Kingdom), Mr. R. McChesney (Southern Rhodesia) is acting as the conference secretary.

In his opening address, Mr. Creech Jones said:

"A year ago to-day, most of you were assembled at Brazzaville to discuss the menace of the diseases carried by the tsetse fly and the various means of combating it. On that occasion, the somewhat uneven response of the Governments invited to send representatives to the conference was, I feel, a measure of the concern which we all feel about the problem."

"You meet at a time when considerable public interest has been aroused in the problems before your committee. Great hopes have been stimulated, and we all hope these will prove to be well-founded. In the great conclusions of the Brazzaville Conference, you recommended that two organizations should be set up to give continuity to the existing activities which you had found so useful. Both of these recommendations have been accepted by your Governments and are now being put into effect."

Establishment of Congo Bureau

"In the first place, you decided that a small permanent bureau should be set up in the Congo through which information relating to the whole question of tsetse and trypanosomiasis could be regularly exchanged. Responsibility for setting up the bureau was given to the French and the Belgian Governments, and I have no doubt that you shall be hearing from the French and Belgian members of this committee of the progress with its establishment."

"Secondly, you recommended that a small international committee be set up to review and co-ordinate the different lines of research being followed in many parts of Africa and Europe, and to recommend priority for future research. The establishment of this committee was entrusted to me, and I am this day particularly pleased to welcome you here to-day at its first meeting."

"I would like to emphasize two things. This is not intended to be a repetition of the Brazzaville Conference; it is the opening meeting of a standing research committee. Your Government nomination by your Government to serve on this committee

for a period of one year, two years, and I hope that your attendance at this week's session is but a beginning of your labours. Around this table you will have the opportunity of discussing aspects of the various aspects of research which we are most interested in some of your minds at the moment as research develops, you will wish to keep each other informed and to exchange views on the relation of new discoveries to the whole problem of trypanosomiasis in Africa. When and where you will meet again is a matter for you to decide during the course of the week. But I trust that, even when it is not in session, this committee will prove an efficient co-ordinating force, already engaged in research in this field, and in inspiring new research."

"The second point I wish to make is that, in advising your Governments to make possible the establishment of this committee by nominating you to serve on it, it was not our intention to create a Government organization. We in the Colonial Office have long been indebted to the many scientists and other experts who give us voluntarily of their time in serving the various Governments, and we have consequently come to appreciate the need for a committee which latitude as possible for the freedom of discussion on scientific matters with as little official obstruction as possible."

"This freedom is particularly necessary in questioning pure research, such as those which you will be discussing this week, where and the fact that the attendance at meetings of this committee has been strictly voluntary to scientists directly concerned with trypanosomiasis will enable you to conduct your business as scientists and not in any sense as the delegates of various Governments. Whilst it would be interesting to compare and discuss national approaches to the problem of trypanosomiasis, it is not the business of this committee to do so. It will be more advantageous if the problems are considered rather from the different scientific viewpoints."

"Our discussions will cover a wide field. In the first place, you will be asked to define the committee's functions and to lay down the lines on which it should work. Then you will wish to review the present organization of research in the tsetse territories in Africa and in Europe, and to attempt some appreciation of the work already in hand. It is a time that before you leave this town, you will have been able to give some indication of the subjects of which you had that research it most urgently needs."

Possibilities of Anticyde

"On Tuesday, the formulae of the new British drug, anticyde, will be placed before you, together with detailed results of a field trial in the Sudan and in East Africa. You will have an opportunity of questioning members of the team responsible for discovering and developing the drug. I should like to take the opportunity of paying my personal tribute, recorded in the *Times*, which has flown over from Kenya to attend Tuesday's session of the committee, and to the late Dr. Chabry, who so tragically lost his life just before the discovery was announced. It is largely to the devotion to research on the part of these two men that we owe the discovery of anticyde, with the promise that it holds for the control of animal trypanosomiasis. I would thank all other scientists who have already contributed to knowledge in this field."

Committee's work on the war on the tsetse fly

"The new drug, anticyde, is directed against tsetse and also against the tsetse fly itself. It is not yet assured that its curative properties may be far in advance of anything yet discovered. There is, however, some doubt about the duration of its protective action, and the dosage necessary to be effective. The meeting of the committee in session may provide some further information."

"Hitherto, the cures and preventives devised against tsetse have had the disadvantage, among others, that when heeds are being inoculated, immunity has worn off in some tsetse before all has been treated. The hope is that anticyde may provide protection for six months, a time which may be possible to eliminate the tsetse progressively from the tsetse areas, another, and also for cattle to be fly-infested areas without picking up the disease."

"However effective anticyde might prove, it will be necessary to do no easy matter to organize immunization in the field. National preventive owners of tsetse-infested areas have to be persuaded to co-operate with the veterinary services and travelling teams of trained men will be necessary."

"Elimination of the tsetse fly will be a long and difficult task. It will matter if possible for you to discuss the various aspects of this problem. It is not yet clear what will be the most effective means. What are the opportunities which will be opening up, you call for careful thought and planning."

Bulk Purchase, Preference, and Long-Term Guarantees

Controversial Debate on Colonial Topics in House of Commons

BULK PURCHASE AND LONG TERM GUARANTEES

to primary products in the Colonies were the subjects of an adjournment debate which resulted in some sharp exchanges in the House of Commons last Friday. Although the subject originally raised was that of 32 other most speakers ranged widely over the Colonial Empire and aspects of Imperial Preference, the grounds scheme, and attendance at debates on the Colonies were also raised.

Deciding the system of bulk buying, Mr. MICHAEL FOOT in a bombastic speech possible to be in favour of the Empire and against bulk purchase. He suggested the formation of a commission of enquire to examine the whole question of bulk purchase from the British Colonies, to investigate its advantage, disadvantages, and difficulties, and to try to work out a planned basis.

"The system had moved up by not mentioning the war, and had since been greatly expanded. It is a right that it should be expanded," Mr. Foot continued, "the all the peoples of the Colonies think it right." Obviously, there is a great dear of education will to be done on the subject.

"The fact was that we could not have a British Commonwealth in this century except on a planned basis. If we went back to a free market in various commodities, there would be a return to political distress provoked by economic decay, and all our plans for Colonial welfare would be ruined."

Biggest Development in Past Decade

"I believe, therefore, that if this policy can be worked out in greater detail and presented to the nation more imaginatively than it has yet been presented, this Government will be doing a great work for the British Empire. The system of long-term bulk purchase is in fact the biggest single economic development in Imperial and Commonwealth relations that has taken place during the past decade."

Sir PETER MACDONALD (Conservative) said that he was amazed to hear Mr. Foot upholding the British Empire and a policy of Imperial Preference. In his recollection of nearly a quarter of a century in the House, Mr. Foot's father and other members of his family had done nothing but uphold a policy of *laissez faire*. They had votes against every motion of British dealing with Imperial Preference, and had opposed it in their lives in Parliament. He was therefore very glad to see this new disciple of the doctrine of Imperial development. The House had not yet heard whether or not the Labour Party really believed in Imperial Preference.

Government Planning

MR. FOOT, in reply, said about Imperial Preference was that the system of long-term bulk purchase contrasted with the whole issue of Imperial Preference, which he regarded as a very important issue. He was therefore very glad to see this new disciple of the doctrine of Imperial development. The House had not yet heard whether or not the Labour Party really believed in Imperial Preference.

Sir Peter Macdonald continued that he had spoken about planning but he should not be asked to speak in a general sense of the question of long-term bulk purchase. He would not be asked to speak in a general sense of the question of long-term bulk purchase. He would not be asked to speak in a general sense of the question of long-term bulk purchase.

Mr. Foot, in reply, said that the Government had been very clear in its attitude towards the grounds scheme which was being in this House as a result of the British Empire and as an example of what this one of our Government are doing for the Colonial Empire. He was

until a few days ago when the Minister of Food, in his report on that project, and we have what the report has been—there we shall see how his members opposed about developing the Colonial Empire.

MR. D. W. P. (Labour) said: "The hon. member seems to derive some pleasure out of anti-Imperialism. The report will be explained how he intends to do and the attitude of anticipatory pleasure at what he seems to think will be shown by the shortcomings of that scheme?"

Sir P. Macdonald: "Believe me, I am not pleased about the facts. Why should I be? When did we see the introduction of the House by the Minister of Food? I suppose it is not only too sorry that he has been brought in but I am not pleased about the facts at the day in which has been handed by the Government."

"I am all in favour of Imperial development, even in the initial stages of it. I was amazed at the grounds scheme which was being in this House as a result of the British Empire and as an example of what this one of our Government are doing for the Colonial Empire. He was

Derogatory Reports on Grounds

MR. HAROLD DAVIES (Labour) remarked that he felt embarrassed by some of Sir Peter Macdonald's "irrelevant and irrelevant incoherences." Only that week he had travelled on a train from the north and a gentleman opposite had been reading a derogatory article about the grounds scheme in a newspaper. "I don't know," he said, "but I don't think you would be anyone who is not something about the grounds scheme. I know the grounds scheme is a very difficult and difficult, but this has been the greatest project any Government has undertaken."

MR. ALAN D. WORTH (Labour) said that the Conservative had always passed as great opponents of the grounds scheme though there had been several days notice of the grounds scheme for a target list of the discussion. Only two Opposition members had been present. Sir Peter Macdonald had made out of the (Mr. Crawley) that it was one of the most derogatory speeches ever heard in a House of the Colonial Empire.

MR. FOOT, in reply, said that he was amazed to hear Mr. Foot upholding the British Empire and a policy of Imperial Preference. In his recollection of nearly a quarter of a century in the House, Mr. Foot's father and other members of his family had done nothing but uphold a policy of *laissez faire*. They had votes against every motion of British dealing with Imperial Preference, and had opposed it in their lives in Parliament. He was therefore very glad to see this new disciple of the doctrine of Imperial development. The House had not yet heard whether or not the Labour Party really believed in Imperial Preference.

Mr. Foot's Office

MR. CRAWLEY, in reply, said that he was amazed to hear Mr. Foot upholding the British Empire and a policy of Imperial Preference. In his recollection of nearly a quarter of a century in the House, Mr. Foot's father and other members of his family had done nothing but uphold a policy of *laissez faire*. They had votes against every motion of British dealing with Imperial Preference, and had opposed it in their lives in Parliament. He was therefore very glad to see this new disciple of the doctrine of Imperial development. The House had not yet heard whether or not the Labour Party really believed in Imperial Preference.

MR. FOOT, in reply, said that he was amazed to hear Mr. Foot upholding the British Empire and a policy of Imperial Preference. In his recollection of nearly a quarter of a century in the House, Mr. Foot's father and other members of his family had done nothing but uphold a policy of *laissez faire*. They had votes against every motion of British dealing with Imperial Preference, and had opposed it in their lives in Parliament. He was therefore very glad to see this new disciple of the doctrine of Imperial development. The House had not yet heard whether or not the Labour Party really believed in Imperial Preference.

New Governor for Mauritius

SIR HILARY HILDRY, K.C.M.G., Governor of Barbados since 1947, has been appointed Governor and Commander in Chief of Mauritius in succession to Sir DONALD MACKENZIE-KENNEDY, K.C.M.G., who is retiring from that appointment.

Sir Hilary, who was born at Kilmarnock in 1885 and educated at the Irvine Royal Academy and Glasgow University, served throughout the first World War in the Royal Scots Fusiliers, and entered the Devonport Civil Service in 1920. Ten years later he was appointed Colonial Secretary of Grenada, became Colonial Secretary of Sierra Leone in 1934, and Governor of the Gambia in 1942.

Sir Donald Mackenzie-Kennedy has been Governor of Mauritius since 1942. Born in 1889 he was educated at Marlborough and Clare College, Cambridge, entering the Northern Rhodesian Native Administration in 1917, and being appointed Native Commissioner six years later. In 1927 he was made Chief Secretary to the Northern Rhodesian Government, and became Chief Secretary, Tanganyika Territory, in 1935, in which capacity he served for four years. From 1939 to 1941 he was Governor and Commander-in-Chief of Nyasaland. Between September, 1939, and April, 1940, he also occupied the position of Chief Political Liaison Officer, East Africa.

Nyasaland Drought Broken

THE DROUGHT IN NYASALAND, which so threatened the Protectorate's food situation that the Governor issued a special appeal and asked for emergency powers, was broken off February 3, when general rains fell except in small areas in the extreme north and south. Growing crops have ceased to deteriorate, and the planting of supplementary crops and the replanting of grain is going on satisfactorily.

to construction. They are imported from overseas and acclimated. For Africans are almost morbidly susceptible to the fear that we are withholding from them what we ourselves most value. They do not know how critical we are of our own established systems, and they suspect that any proposal we make of something especially suitable to African conditions is really an attempt to foist upon them something secondary which we should reject for our own the.

Consider the school cap. This study and miscellaneous object, introduced by English missionaries some years ago, is now the mark of a school of good standing in Uganda. Yet if Africans need to protect their heads against their equatorial sun— which, in spite of their many protestations, I think they do— no less suitable headgear could be found for the purpose than a close-fitting cloth cap. Not only practical use, however, should be given, "was to disguise the young men of the country as 'students' is a more dignified form presented and to receive the collector of taxes. But in a highly prized, and to be made of which it would produce strong opposition.

The first personal situation in which I was asked to intervene at Makerere concerned a young man from Kenya who was a student at the college. He had visited a fellow tribesman who had accused him of thieving, the result of making improper advances to his wife and children down the road, waving a big knife. It did not seem to me, however, that the young man was so much concerned about his physical safety or even the aspersion on his personal honour, as about the fact that he had left his cap, a heavy cap with a red tassel. In the angry husband's scow and could not get it back.

I was in a predicament, unique in my experience, and it puzzled me for some time. I have since wondered whether there may have been some magic mixed up with it, so that the cap was thought of as a dangerous hostage to have given. Anyway, it was much prized.

I later persuaded some of the young men that caps were perhaps more suitable for the climate than the young students' and they were happy, out of fashion when I left.

(To be concluded)

Attitude of the African Towards Cattle Must Be Changed

Dr. Paul Linde Discusses Problem of Live Stock Currency

WORKING OPINION has been made, through the African consciousness by President Truman's recent statement foreshadowing American assistance for the development of "backward areas," wrote Dr. Paul Linde in his article in the *Financial Times* last Friday, which we are invited to quote textually.

Although the dark continent was not specifically mentioned, it must be readily felt to be foremost in President Truman's mind. "backward area" implies immense possibilities. In his former statements, attention was paid to the country in the form of gifts of African labour, and the development of agriculture. It is essential, however, to realize that the resources of the United States vast as they are, have their limits. That is why the United States should be enabled to provide financial assistance should be employed for projects that promise a return in the form of raw materials to which there are no improved domestic schemes.

Use of American Selling Stock

There are many ways in which the dollar terms of dollar-saving exports of the African Colonies could be increased. The purchase of goods, for instance, the acquisition of motor vehicles and other railways which would result in an immediate increase of the value of African copper and uranium groundnuts. The known resources and other natural resources of the continent could be made accessible by the provision of adequate equipment and transport facilities with the aid of valuable goods imported from the United States. Many such practical plans could be produced and they are likely to appeal to the businesslike American mind.

In the interest of the success of Colonial development it is essential, however, not to come forward with grandiose schemes of improved motor. They are bound to inspire distrust in the United States. For instance, it would be a grave mistake to try to enlist American assistance in an attempt to translate into a form the pattern of developing in Africa a second Argentine. The only way to proceed recently Col. Ross Williams, parliamentary secretary to the Colonial Office, has means that the Government envisage the expansion of production in Africa such a scheme as to enable British to secure a large proportion of the meat imports from the new created supplies of her Colonies. Instead of having to depend on the good will—if the term can be used at all in this connection—of the Argentine.

After this country's experience with the Argentine in recent years, the proposal for finding alternative

resources is bound to be quite unpopular with the British public. But to anyone acquainted with conditions in East Africa the difficulties, advantages and even dangers of such a scheme must be obvious. It is elementary knowledge that many East African and South African areas are grossly overstocked with cattle and that this has resulted in a fall resulting in soil erosion at an alarming rate. Owing to the inadequacy of grazing land for cattle, goats and sheep, the grass is eaten up completely, the soil runs into dust and is blown away, leaving behind bare rocks or exposed banks of silt.

The Government's aim is to provide additional grazing land in areas which are at present unsuitable. A considerable increase it might be possible to eliminate the issue from these areas. But this would not necessarily mean that more cattle would be slaughtered for export. In existing circumstances all it would mean is that vast areas which are at present protected by the waste by their soil, and so would share the fate of areas which are exposed to the consequences of overstocking.

The root of the trouble is that in large parts of Africa cattle (and to a less extent other live stock) are still regarded as a kind of limited currency. This means that the native tribes are reluctant to part with their animals.

Prestige Expressed in Cattle

These are essential to certain commercial transactions, such as the payment of the price fines and shop money which requirements alone insure an almost unlimited demand. Live stock is also used for large purchases of implements, or for the purchase of a man's bride price. Above all, the tribes are contracted in terms of their animals. Above all, the tribes are contracted in terms of their animals. Above all, the tribes are contracted in terms of their animals. Above all, the tribes are contracted in terms of their animals.

The animals are killed for food, but the meat is usually sold to some extent. There they are kept till they die a natural death. The kind is to possess the largest possible number which is regarded as a quality of the tribesmen, so that the difference between a well-bred young cow and a less well-bred old cow is not so much in the quality of the meat as in the quantity. It is not so much in the quality of the meat as in the quantity. It is not so much in the quality of the meat as in the quantity.

So long as this attitude remains, the increase of grazing facilities would mean only that the natives would herd even larger numbers of animals. The quantity of cattle surrendered for slaughter would not increase appreciably, and the quality would remain unsatisfactory. The net result of the increasing of the eliminating of the cattle would be that the areas would be overstocked with cattle, and the soil would be ruined, which are now gaining a new year after year in ground eyes.

...investing our limited resources and those of the United States, into a campaign for the extermination of fleas. It is essential to bring about a change in the attitude of Africans towards cattle. The problem has for decades preoccupied the minds of Colonial administrators. They have been trying hard to convince the Natives of the futility of their system of live-stock currency. They have also applied various taxation and other legislative devices.

Some small progress has in fact been achieved, but not nearly enough. Various practical proposals have been made by experts, but little has been done to put them into operation. For instance in his report to the Kenya Agricultural Commission in 1929, Sir Daniel Hall suggested the issue of coins bearing the image of cows or of providing special tokens shared like live-stock and convertible into modern money. To bring the government back towards the use of animal and mineral tokens or vouchers, it has also been suggested by Mr. A. E. G. Robinson in Lord Bailey's African Survey, that the Colonial Government should impose a progressive tax on trading with the natives, in order to discourage the practice of keeping them until they die of old age.

Encouraging Spirit of Competition

Another device which might serve a useful purpose would be the encouragement of the banking habit in the form of the depositing of receipts in the form of badges, the size, design or colour of which indicates the amount of the deposit. Africans and other primitive people are fond of exhibiting their wealth, and one of the reasons why they prefer to keep their savings in the form of live-stock rather than bank deposits is that the latter are invisible. If the banks operating in the Colonies took advantage of the vanity of their primitive clients, they might be able to introduce a spirit of competition among Africans who might like to be able to wear bigger and better deposit badges in order to surpass their prestige and social standing.

Above all, the supply of fundamental goods should be increased, with a careful scrutiny of actual and potential requirements. The younger generation of Africans would be less susceptible to superstitions with their cattle if they had any inducement for sale to make a start on dispelling the conservative village patterns. It is for the Colonial authorities and business men in the Colonies to secure the necessary goods that would enable the natives to spend their money on other useful and necessary articles of household use. The scarcity of manufactures and the shortage of cash is to be deplored. The range of goods between which a native's choice is much too limited. It is a pity that this should be so; for many tribes, through closer contact with Europeans are gradually acquiring a taste for European goods, and are beginning to possess them, but the decisive importance of the battle against the monetary use of live-stock for many years there was evidence of a certain weakening of the cattle complex. Thurnwald in his Black and White in East Africa quotes a Native boy representing the changing outlook as having said: "What is the use of being rich in cows' skins and bones if the man goes in cow skins?"

Scarcity of Consumer Goods

Unless the new spirit is encouraged by additional supplies of the right types of consumer goods, both necessities and luxuries, this gratifying trend is likely to become checked and then reversed. An African assistance should not consist exclusively of animal goods. A selection of the necessities of modern life would be a most valuable stimulus towards the purpose of increasing production and export.

There are many other possible devices that would also should be tried. To raise the standard of living necessarily takes time, but if it could be well worth while to make a supreme effort. If a solution could be found, it would be possible to increase considerably the quantity of cattle slaughtered for export and to have its quality without having to secure additional grazing land with the aid of a special campaign against the tsetse fly. If on the other hand the Africans continued to regard their animals as sacred, then the increase in the size of their herds might be the result of additional grazing land which would serve no practical purpose.

There is a tendency to consider only what is known as the common standard, that is the one common man who would be the condition that enable the best to earn a living and also survive, and he must not be destroyed. In the vast part of Africa, with our racial differences, we can have only pseudo-democracy for a very long time to come, and meanwhile we shall require an aristocracy, in the best sense of the word, to see that justice and advancement be done for the rest of the people. Sir Godfrey Huggins, Premier of the Cape Province, Rhodesia.

Letters to the Editor

Ethiopian literature and theology

To the Editor of EAST AFRICA AND RHODESIA

SIR—From the better I gather that Mr. Merlen has become an expert on Ethiopian literature and theology without having studied the work of Sir Walls Budge, the great British authority on those subjects, who has translated many of the voluminous theological works which have appeared in the *Labor of Ethiopia*, Greece, which is still to a large extent used by the Church, in Latin is used by the Roman Catholic Church.

Professor Rabin, who has recently given a most informative lecture in Oxford on Ethiopian literature and history, would profoundly disagree with the remarks of your correspondent, whose statement that there have been no Ethiopian theologians I must deny. I remark that Amharic does not possess a vocabulary which would enable metaphysical problems to be discussed in that language, is beside the work as Ethiopian theologians in general have written in Guzeze, and they have been reproached by some critics not for failure to discuss metaphysical problems but for having devoted too much energy to such discussions. Amharic is a richer language than Guzeze.

Your correspondent suggests that Ethiopia is a fruitful field for Communism. In fact, there is no Communist movement in Ethiopia, where the opinion is widespread and enthusiasm for national development. A large number of schools of all types have been opened since the liberation, and compulsory education has been enacted. The Government are striving hard to produce sufficient teachers to ensure that no child shall go short of education.

Woods of Green
Essex.

Yours faithfully,
E. SYLVIA PARKHURST

Africans and the Victoria Cross

To the Editor of EAST AFRICA AND RHODESIA

SIR—Mr. Meyer in a recent issue of EAST AFRICA AND RHODESIA Mr. J. S. Davis of Dar es Salaam, director his criticism to the manner in which honours have been allocated in Tanganyika, with the official element heavily predominating. I should like to reinforce his views, but from a different angle.

I cannot recollect ever having seen, heard, or read of the Victoria Cross being awarded to any African askari or N.C.O. in East African fighting units, although Heaven knows their bravery, loyalty and brilliance in battle have been proved time and time again.

Woods of Green
Essex.

Yours faithfully,
GOMER L. WATSON

[It is noted that no award of the Victoria Cross has ever been made to an African from any East or Central African Dependencies.—Ed.]

Better Late Than Never

To the Editor of EAST AFRICA AND RHODESIA

In connection with Mr. R. S. Williams' statement reported in your last issue, I have now decided to link up the Tanganyika Railway with the Kenya line, and to have a survey made from Broken Hill to the Tanganyika line, it is perhaps not altogether irrelevant to recall that as far back as 1917—nearly 20 years ago—the Economic Commission of what was then the East Africa Protectorate urged the linking of Broken Hill to the Egyptian Railway via Tabera and Rangoon, and the immediate undertaking of the survey necessary for that purpose. The author of the proposal was Mr. Grogan.

Woods of Green
Essex.

Yours faithfully,
GOMER L. WATSON

BACKGROUND

Communist Among Teachers

I have before me a document issued by the North-West London, West London and East London "Fractures of the Young Communist Action Group". Its first paragraph has the sweeping comprehensiveness which we associate with the Communists: "Oust the War-Fromers, Evacuate Berlin, Smash Marshall Aid, End European Recovery, Kill the Wage-Freeze Equal Pay at once, Party Now a Fiat, Raise Bonus immediately, increased Pensions forthwith, Repeal the Council for Unemployment Act's etc. etc."

Disown "bourgeois pseudo-science. Support anti-Imperialist fighters everywhere. Reduce the Armed Forces. Unconditional defence of the Workers' State in Russia. A United Left front in the London Teachers' Association Elections."

This programme of slogans, provides a first class example of how the Communist mingles Russian propaganda with appeals to the sectional self-interest of the group of people addressed. The war-fromers are the extreme pro-British Labour

element which has surrendered to the "Evacuate Berlin, Burn and Ceylon" "Evacuate Berlin" for the Russians are flouted by the attacks of the air-lift, which has cut across all their plans for driving the Russian Powers out of that

"End European Recovery" — for if Europe recovers the boundaries of Communism, which thrives on misery will steadily and ever be pushed back eastwards. Support anti-Imperialist fighters everywhere means backing the murderers of Malaya and elsewhere.

The document proceeds: "If only a few more of our nominees win their contests we shall be in a position to control the membership of all the committees, chairmanships, and nominees to outside bodies, and give all the appointments of an assistant secretary and the control of the London Teacher."

In this paragraph so frank and revealing, the aim and end of the Communist penetrations is plainly disclosed. **Time and Tide**

Mr. Morrison is under pressure from the left-wing intellectuals and the most aggressive piece of Socialism they have in mind is the nationalisation of insurance companies. Why do they want this industry nationalized? It is because it would mean the virtual end of private enterprise in Britain.

The insurance companies, by virtue of their vast and scattered investments, have a financial interest in almost every industry in the country, and under nationalization these interests would come automatically under the control of Whitehall.

Economic Recovery. We are operating in a severely stretched economy, in which it is extremely difficult to finance the competing demands for an increased flow of consumer goods to restore the standard of living for a still larger volume of workers to pay for our severely limited exports, and for the improvement of our capital equipment and amenities of stocks after years of inadequate replacement. It is in the context of these demands, following the disruption of war, that we find the true causes of inflationary pressure rather than in any plan that has been done or anything omitted, in the conduct of our monetary affairs.

It has to be observed that some of the measures adopted after the war to lower the yield on Government securities provoked manifestations of an inflationary condition which might well have been avoided. It follows that while financial conditions, including the conduct of the public finances, should be attended as far as possible to the general purpose of economic policy, the real and most readily available remedy is to be found in a progressive enlargement of the total output from British industry.

Effort must now be concentrated on using the available resources in the most productive way, removing obstructions to efficient production and vigorously seeking and applying technical improvements. On a broader view, one cannot regard it as satisfactory that the number of civilians in the service of the central Government remains as high as at the end of the war, or that the increase in the number of people employed in distributive trades is almost as large as in manufacturing industry, or that the planned addition to the total manpower in coal-mining and steel has not been achieved.

Moreover, automatic controls, necessary though many of them may be, contribute to the enhancement of the proportion of administrative to directly productive staffs in industrial undertakings. Failure to solve the manpower problem must be reflected ultimately in a lower standard of living. The position in industry, and indeed throughout the economic system, is such as to call for the highest standards of skill, judgment, and resourcefulness in management.

Time passed for with the running-down of the momentum of reconversion the rise in the curve of industrial production taken as a whole, seems to have slinked in recent months.

Lord Linlithgow, Chairman of the Midland Bank, Limited.

Commercial Interests

The Lynskey report will have considerable effect in determining the course of Ministers, public men, and the law service. All save a small minority have come through with their negotiations unblemished. One community, however, the commercial and industrial, is pained to suffer through the imputations made in some very undesirable practices were undisturbed by certain people because it was believed that that was how British business men behaved twenty years in business of a war.

They are convinced that the general standard is very high. They know it so more honest conduct and industrial community anywhere than in this country, and I have traced in most parts of the world. Unfortunately, present restrictions, licensing and control provide unusual legislations which some cannot resist, but the main body of industrialists and traders remains inherently honest and straight-forward.

Before the war small and large transactions took place privately and on the exchanges of London, Manchester, Liverpool, and elsewhere by ordinary means within a month. The represented many thousands of millions of man-hours of employment for our factories. We beside these of with prevarication, wretched and desired to restore unbecomable practices. A useful motto for British business men to follow is: "If you cannot have pleasant and honest relations in your affairs, have none at all."

By way of the British business standard, Sir John S. Doid.

Ignoring the war period, England will have grown two television stations in seven years against the United States yet in two years. Even more startling is a forecast recently made by the chairman of the U.S. Communications Commission that there will be 100 stations operating in the U.S. by 1950, and that within seven or eight years there will be 1,000. After six years' operation in England, 10,000 sets have been manufactured and installed here. Compared with this, the same American authorities have indicated that by the end of 1948 more than 1,000,000 homes in the United States would have sets.

In spite of the great strides made in America, however, the B.B.C. television service is still the best in the world. Sir John S. Doid, managing director of Electrical Musical Industries.

Decade of Progress in Mission Stations

Archdeacon Capper's Encouraging Account

Encouraging progress in mission stations in East Africa is described in the current issue of *Central Africa*, the monthly journal of the Universities' Mission to Central Africa, by Archdeacon Capper, who writes: "Ten years is not a long time in the life of the Church, or even in the life of a 'mission station' as ours. But it is a long time in the life of the people of some mission stations that I had not seen for 10 years, and it is one particular of the progress over this period that has been remarkable.

One of many years the number of African girls was far behind that of the boys. In some years of Christian teaching Muslim influence was so strong in the Westsi process that very few parents thought there was much profit in sending girls to school. Few new recruits of any kind went open to African eyes. How often missionaries tried to preach and teach that with an advancing educational system the young men must be able to look for enlightenment and help in the way they hoped some day to marry. But it was a difficult problem and we had not got very far 10 years ago except for one or two pleasant girls' boarding schools.

The first surprise came when among the candidates who came to Lambeth Government Hospital for a nursing examination I discovered a girl I remembered as a child at Minda C.S.P. school, in a group of rough, backward little Makas girls, now a smart young nurse in uniform, winning good opinions for the mission from Government examiners.

Progress of Girl Students

I next had an opportunity to visit Newika. I well remembered its girls' school when I lived there 10 years ago. In those days the boys had quite good schools, but a small hut of split bamboo near the convent was considered good enough for the few Makoma girls allowed to read by their parents. This time Sister showed me a block of buildings used mainly for the girls to provide for increasing numbers; some fine brick buildings were nearly completed. As we went round the school I was delighted to find not only that the girls were quite so far advanced as to be in standard VI, but that standard VI had an African woman teacher. Some of the girls were boarders, and as I looked at their neat book-work and at their hand-work, and thought how much they would learn about home-making, I wondered what an influence they might be in the neighbourhood of Newika.

A few days later I saw St. Mary's School, Newika, for the first time. I expect it has often been described. The circle of houses, each with a family of small girls, doing their own cooking, and in the midst of their studies learning to read better and more hygienic African home. The domestic science garden and potting shed was especially well done, and credit to a school in East Africa. A very beautiful chapel full of brightly-dressed African maidens joining in a song, not just sitting dumb while the men did the singing, but each one with a book open at the right place.

Later, as I went round the school, I found that some of them had very nearly reached the same standard as their brothers in the boys' boarding school. I remember Newika 10 years ago as just a forest through which we went to reach a part of the bush where an initiation rite was held. One can only thank God for what the change means to African life in these parts.

Rain at Kongwa

MAJOR-GENERAL DESMOND HARRISON, resident member of the Overseas Food Corporation at Kongwa, who is returning to this country on convalescent leave, said before leaving: "Unless the rains go completely sour on us, we should get our 50,000 acres." A promising fall of rain at the end of December had enabled planting, although belated, to begin well. This was followed by a heavy spell which caused some damage to the latest crops, but that rain over the whole of Kongwa has been very heavy.

More Dangerous than the Male

WIVES OF AFRICAN POLICEMEN who attend jiu-jitsu classes in Kenya are, according to the instructor, adept pupils than their husbands.

Book Reviews in Brief

East African Annual, 1948-49, a 128-page issue, maintains its usual high standard of production. There are articles on trekking to Kenya, the Colony's national parks, hunting and big game, fishing, Gedi, homes and children in Kenya, the Nairobi aquarium, the first experiences of a new settler, the Ogera Falls hydro-electric scheme, the Elgeyo-Lake Baringo, Hannington, and Rudolf the groundnut scheme, potentialities of the Tana, and other topics. Photographic illustrations are many and good.

African Mineral, 1948, the first post-war issue of which has appeared at 42s. (Mining and Industrial Publications of Africa, Ltd.) runs to more than 1,000 pages, about 200 of which are devoted to the Rhodesias and East Africa, in addition of course, to the references to companies operating in those territories in the directory section, which is almost wholly of some interest. The volume, which is well printed and stoutly bound, is essentially a work of reference for the mining industry, predominantly that of the Union of South Africa.

Useful and Ornamental Plants of Zanzibar and Pemba, by R. O. Williams (Crown Agents for the Colonies, 21s.).—In this 497-page volume the Director of Agriculture in Zanzibar describes some 300 plants. The useful and ornamental plants are separately listed, and then the plants are named (common and botanical names being given) and described. Much of the plant life of the neighbouring mainland territories is similar, and the book has therefore a usefulness beyond Zanzibar and Pemba. Major A. T. Bettlor, who suggested the compilation of the volume, has written a long, interesting and valuable introduction to a work of reference for which there was evident need.

PLANTERS!
Buy Wisely
 When You Buy a
RE-BUILT
TRACTOR

A Saville Built Engine 2 1/2 Ton Tractor

INTERNATIONAL CRAWLER TRACTORS
 re-built by SAVILLE will solve your "Problems"

There is an urgent need of crawler tractors in East Africa to-day. With new Tractors very short of supply, and dollars also presenting a serious problem, the re-built tractor is coming from East Africa into demand.

If you are thinking of buying a re-built tractor, and no matter you wish to use it for a word of caution! Buy Wisely. In other words, be sure that your supplier is a special distributor of the very best quality. The make of tractor is a consideration, and that undertaken by men who have made a life long study of the particular machine, and whose business it is to stock the full range of genuine spare parts. For example, if you have received a tractor for re-building, it is the

Manufacturer's supply, and best of all, Tractors come from this area—Africa—where they have seen its conditions, and built to stand up to the least sign of wear and tear under the most severe conditions. The smallest nut or screw. The re-built tractor is admitted to the most exacting conditions of use, the final run-out tests to be confined to hours, and this test is not complete until an official certificate has been issued. The fully assembled tractor endures an equally severe run-out of 1000 before it is ready for export. When finally it leaves the workshop, it is actually a re-built tractor, and will behave as new. This is what you are looking for.

Pay attention to you are coming based on these or else will be disappointed. Contact our International Crawler Tractor Division.

members of Re-built Tractors to the East African Commission, the Federal Commission, and other important bodies both in Africa and in the Colonies.

B Barclays Bank Commercial Report

BARCLAYS BANK (D.C. & O.) state in their latest commercial report on economic conditions in East Africa:

General.—The Territory has suffered a severe drought since November which has demanded urgent and prompt attention on the part of the Government. Special emergency powers have been promulgated to cover the food situation, and the Government has taken wide powers to avert the starvation that threatens many areas. Officials are spread throughout the Territory as field officers to encourage the African population to work incessantly at growing crops wherever possible. In the Southern Province the position is serious; the Central Province has had fair rains, while conditions are somewhat better in the Northern Provinces. The utmost effort will be required to retrieve losses and to remove the present anxiety when the rains break.

Very little planting of tobacco had been completed by the end of November, although seed distribution had indicated that the number of gardens would be approximately the same as last year. The dry weather has not occurred since is believed seriously to have endangered prospects for the next crop. One's most keen critics in November were higher than usual. Exports during the month amounted to 67,277 lb. Good rains were, however, required to ensure a favourable crop and these have not fallen.

Final purchase figures for the Southern Province cotton crop showed that it reached 102,300 short tons of seed cotton, which is a record.

General Trade.—European trade is reported excellent with supplies good. The improvement in tonnage handled from Beira by the Nyasaland Railway has been encouraging. Native trade has been well maintained and stores are reported well stocked. Although cash continues to be in short supply, consequent upon the drought, however, it is evident that the spending power of Africans has shown a marked decline.

Architects

APART FROM PERSONS already engaged in such practice, in whose favour exemption is to be made, it will soon be illegal for anyone to practise in Northern Rhodesia as an architect or quantity surveyor unless registered under an ordinance now before the Legislature.

Lord Treigarn's Visit to New York

"Hitting from Board to Board"

COMMENTING ON MONDAY upon the journey by air of Lord Treigarn, chairman of the Colonial Development Corporation, to see Mr. McCloy, president of the World Bank in New York, "Observer" writes in the *Financial Times*:

"Lord Treigarn is a notable pluralist. He has flown west to search for finance from the World Bank, Mr. McCloy, the president, is said to look with favour on Lord Treigarn's schemes. Certainly it is possible that the Americans will be interested in mining propositions in Africa. But it is to be hoped that the plans of the C.D.C. have been worked out with greater care than the original estimates for Mrs. Strachey's grandchild scheme. The precedent of Tanganyika is hardly likely to impress the World Bank.

It might be easier for the Americans to have confidence in Lord Treigarn's prospects if he were doing his whole time to Colonial development. But, accordingly, he is also a director of Tobacco Subsidies Trust, which has been very successful in Africa. Furthermore, Lord Treigarn is chairman of the Government Television Advisory Committee. Since the war this country has built two television stations in comparison with America's thirty. We now possess 10,000 television sets a month in comparison with America's 100,000.

I do not know how much encouragement the British television industry gets from Lord Treigarn, but his record in television will scarcely commend him to the Americans. Clearly the development of the Colonies and of television should not be in the charge of a man who has the time to do both.

Frozen Incentive

A PLEA FOR THE INCREASED SUPPLY of ice-cream to Africans as an incentive was made in the recent House of Commons debate on American Aid and the European Payments Bill by Col. A. D. Dodds-Parker, who said:

"At present, in Southern Tanganyika, where the Government is engaged in large developments, the development of the new harbour is held up because, instead of workers coming from Portuguese East Africa, they are going the other way, because of the shortage of consumer goods. There are more of these goods in Portuguese East Africa to-day than in Southern Rhodesia, and I would urge the Government to provide an incentive by means of increased consumer goods to attract these people. I believe that one of these incentives which might be used with advantage and which might help very considerably is ice-cream. That may be thought to be strange, but it is a very useful food for Africans. There are sugar and fat in it and as a food for the people of the under-developed territories, I think it would provide a further inducement, and add to a very useful addition to their diet."

Bulawayo's New Bus Service

MUNICIPAL bus services in Bulawayo, Southern Rhodesia, were recently taken over by the Bulawayo Council's company, Ltd. On the night prior to the new service's initiation, the company's staff worked until 5:30 a.m. repairing indicator-blinds and repairing damaged buses which had broken down. The crews of the new service now have white, green and buff uniforms. Temporary shelters for the public have been erected at the city bus-station; a new garage is being erected; and during the first month of operation over 2,000 African passengers were carried. These new buses have been put into operation, and on the first day's run an African boarded one and travelled up and down the routes.

Bonus payments to native labour, based upon results, are to be introduced experimentally in the engineering and electrical departments of Salisbury City Council. After a recent pilot trial, the city engineers reported that Natives had responded well and seemed to favour the scheme.

Oil Commercial Concern

Temporary borrowing by the British Overseas Airways Corporation from Barclays Bank was the subject of an official announcement from the Treasury last week. It stated that on January 15, 1949, the Treasury gave their guarantee in respect of temporary borrowing by the corporation, to an amount not exceeding £5,000,000. Both principal and interest are covered. Issued capital and temporary loans that not taken together exceed £50,000,000 at any one time. The corporation's accounts for the year to March 31, 1948, published last November, do not disclose any temporary loans. Issued capital is £18,612,000.

French Press reports concerning plans for the creation of a Franco-African Development Bank for the development of the French overseas territories have been confirmed by official French quarters. The question is still apparently being studied by a special committee, which may in turn be transformed into a State corporation with the object of financing, co-ordinating and supervising the Colonial development plans. It is expected that important American banks will participate in this scheme, and that French banking institutions have been mentioned at one stage with the possible establishment of the Corporation.

The Commonwealth Telegraphs Bill, introduced into the House of Commons last week, is intended to give effect to certain provisions of an agreement signed in May last year between Commonwealth Governments, including Southern Rhodesia, for coordinating the efficient and development of the external telegraph services of the Commonwealth. A Commonwealth Telecommunications Board, nominally by a lesser Government, is to be established, and the power of the Postmaster General to make such arrangements is extended.

Shipping in Dar-es-Salaam
A satisfactory situation in handling inward and outward cargoes at Dar-es-Salaam is reported, following the arrival of four lighters from British. A revised system of speedy clearance from the sheds was introduced last week together with a system of sailing direct from lighters, which is proving valuable in keeping wharves unobstructed. Further lighters are expected within a week or two, and an additional crane was put into service a few days ago. It is also stated that the recent implementation of a port capitation is already showing good results.

Ships entering Kismayu harbor during 1948 numbered 806, compared with 700 in 1947, with a net tonnage of 2,433,000 (2,100,000). Imports handled totalled 1,472,965 tons (1,074,706 tons in 1947), and exports 852,394 tons (614,715). A steady increase in distribution is reported from the port, and it is expected that 1,200 tons monthly will in future be sent south for the Overseas Food Corporation.

A new organization, established last week, known as the Wool Bureau Ltd., with principal offices in New York, will conduct a long-term programme of technological and market research, education, trade surveys and promotion. The corporation, working on a non-profit basis, is to have a board of directors which will include representatives of British Commonwealth wool-growing interests, who will be selected at an executive meeting of the International Wool Fabricity and Research Fund in London next May.

The current news letter of Messrs. Edm. Schluter and Co. states that British East African colices have reached new high price levels. The temporary decline of Uganda Natives was short-lived and was succeeded by a renewed climb beyond previous levels. Kenyas, too, have continued their advance. However, certain foreign countries, finding it preferable to use limited amounts of foreign exchange to cover their requirements, rather than pay premiums for these East African sterling colices, are turning elsewhere.

Trade With Japan

A joint delegation is to be sent to Japan by the British and United States Governments to review trade under the present agreement and the programme for trade between countries of the British Commonwealth and Japan. The existing agreement, which was signed in November, 1948, provides for trade exchanges to the value of at least £55,000,000 in the year ending June 30, 1949. Trade was to be conducted on a sterling basis, and was to be approximately equal in each direction.

Full allowance was being made in the Anglo-American tobacco talks for all supplies which Britain could obtain from other sources. Mr. Harold Wilson, President of the Board of Trade, gave this assurance recently, adding that nothing which took place in these talks affected the need for the United Kingdom to obtain non-dollar sources as much tobacco of suitable quality and price as possible.

Mr. S. H. Marshall, M.P., has been appointed chairman of Tintex Dyes, (the products of which are packed and distributed by Marshall's Food Products, Ltd., of which Mr. Marshall is chairman); a company with interests in Kenya. Mr. F. W. Harris, M.P., who is the new managing director of Tintex, is now residing in Kenya. He is also managing director of Marshall's Food Products.

East African Sisal Plantations, Ltd., suite the production of sisal and tow during January was 265 tons, making a total of 1,385 tons for the first seven months of the company's current financial year.

The first three of a fleet of 20 Guy Arab single-decker buses arrived recently in Khartoum, where they will operate a public service for the Sudan Light and Power Co. Ltd.

Sisal in LINCOLN

Not exactly, but our technicians include sisal producers, and our knowledge of every day sisal estate requirements would make it seem that we indeed grew Sisal in Lincoln. For more than forty years we have been the only British Manufacturer of Fibre Extracting Machinery. We have made it a specialised study and we know for that reason that our customers are satisfied that our equipment gives outstanding reliability for very moderate prices. Our equipment includes: Fully Automatic Decorticators, Hand Reel Spinners for small outputs, Brushing Machines, Diesel Power Units & Steam Engines and Boilers. Adequate Spare Parts Service. We are always glad to hear from old and new customers. Inquiries invited.

MATTERS OF MOMENT

THE GREAT PROJECT of a dam and hydraulic works at Owen Falls, near Jinja in Uganda, has now been carried step by step by the Egyptian Government's willingness to participate in it. The Egyptian Government is naturally interested as any alteration in the flood waters of the Nile may have immeasurable consequences for the inhabitants of the Nile Valley and the Delta. It has been universally recognized that the countries watered by great international rivers are entitled to share in the right of flow in their headwaters, and such matters are usually governed by treaties. Egypt is particularly interested in water taken from the headwaters as it flows through the Sudan, in the Blue Nile in Ethiopia and in the White Nile in Uganda. Discussion between Egypt and Great Britain with regard to the Owen Falls project had been going on for some years, but had become bogged down owing to the generally unsatisfactory nature of Anglo-Egyptian relations. Recent events have brought Great Britain and Egypt more closely together, and it is to be hoped that the agreement for the Owen Falls project is the prelude to similar arrangements.

In default of Egyptian participation, Uganda would have to look for water in a pro-

posed scheme and was last week the Secretary of State for the Colonies announced that arrangements are expected to be completed by the end of September. The significance of the Egyptian agreement is that it opens the way to much more beneficial schemes such as the young Mr. Churchill dreamed when, as the young Under-Secretary for the Colonies, he contemplated the water power of the Owen Falls in 1907. The fact that such a scheme has been able to come about is largely due to the agreement to maintain exportations from the present agreement. It is to be anticipated by experts that it will save some five years before the scheme is completed and carried out, and perhaps will be completed another two years for unforeseen circumstances. It is a fact that Lake Victoria, the water reservoir containing the Lake Nile, will provide the best preservation of water will set the benefit of assured supplies of water for irrigation and Uganda will get an electric supply which can be made the basis of a varied industrial development. The fact that extravagant estimates of the benefits have been made in some quarters should not obscure the real merits of the project.

GOVERNMENT SPOKESMEN have recently dilated on the scourge of disease in the colonies. The tsetse fly has been denounced as "Enemy No. 1," and the ravages of malaria, leprosy, Tropical tuberculosis, dysentery, and other characteristic maladies have been thoroughly recognized. The government's actual proposals for the treatment and study of tropical diseases was therefore heard with all the keener disappointment. Asked what plans he had for the erection of a tropical diseases hospital in London, in view of the Imperial responsibilities of the United Kingdom, the Minister of Health, Mr. Amurth Dewart, replied that it was proposed to develop a tropical diseases centre as a unit of the University College Hospital group. The word "unit" has an ominously diminutive force, and it must be said at once, and said emphatically, that this sprout of a scheme is not good enough.

Before the war London held a place in the treatment and study of tropical diseases which was not unworthy of the cotinuity of Sir Donald Ross and Sir Patrick Manson. The Tropical Diseases Teaching and Hospital, Endelagh Gardens, was wisely linked with the Seaman's Hospital, and afforded adequate accommodation and sufficient material and facilities for teaching. But it was bombed, and despite the work of a devoted and competent staff, the forty beds now available in relatively small rooms in Deanington House, with a laboratory cramped for space, cannot take its place. There were hopes that the United Kingdom would rise to a sense of responsibilities and make plans for a really worthy hospital in the neighbourhood of the School of Hygiene and Tropical Medicine, where the main teaching could be carried on. The Minister's answer, however, dashes these hopes. In view of the domestic needs of an existing hospital accommodation, it is hardly likely that the study of tropical diseases will be given high priority. Tropical patients have, unfortunately, to wait in the United Kingdom. It is plain that under the National Health Service Act, 1948, the responsibility in this matter has passed from the Secretary of State for the Colonies to the Minister of Health, to the Committee Secretary could be expected to take a more serious view of colonial medical needs. Mr. Dewart, who has shown no lack of readiness to spend money on domestic needs, must be made to think

THE INDIGNATION which has been aroused among the European community in East Africa by the recommendations of the mission from the Trusteeship Council to Tanganyika is fully justified. It is almost impossible for a member of the general public to get hold of the document and the United Nations Secretariat should overhaul its procedure in this respect—but some of the mission's statements have been made known in East Africa, and a study of the full report confirms the blistering comments that have been evoked. The report betrays a fantastically academic approach to the political development of Tanganyika. The emphasis throughout is on self-government or independence, with little consideration of the long and laborious steps which are necessary before self-government can become a reality. The Secretary for African Affairs was hitherto aside when he warned the mission that discussion of self-government which might tend to deflect African efforts from those channels in which it could gain advance African interests might be undesirable. It is in keeping with the United Nations, but thoroughly impractical and mischievous.

Count Storza on Eritrea's Future

Anglo-Italian Trusteeship Suggested

A plea that Eritrea should be placed under a joint Anglo-Italian trusteeship was made in an interview in Rome recently by Count Storza, the Italian Foreign Minister. Acknowledging that Ethiopia needed to be safeguarded from possible future aggression, and that Britain was naturally interested in the future of a territory which she had administered for eight years, he said that any attempt to enforce partition at the expense of the local populations, would be repugnant to contemporary thought, recalling the "old scramble" for Africa. The four-power investigation commission had, he emphasized, recognized the political and economic unity of Eritrea, which was capable of attaining independence after a preparatory period of trustee administration. Such a task could not be entrusted to countries still wrestling with problems that Eritrea had to a large measure already solved, and for that reason Eritreans did not aspire to an Ethiopian mandate or to annexation of that country. They naturally desired good relations with their neighbour, but the work begun under Italian administration and continued by the British should not be interrupted but accelerated. To help the long-run, said Count Storza, the future of Eritrea depended on the good-will and mutual understanding of Great Britain and Italy, which had contributed most to the country's progress and were, therefore, under the moral obligation not to abandon it before it had achieved independence.

Materialism and Bitter Nationalism in Africa

To Use Baffle with the Best New Things

THE DECLARATION OF Tropical Africa has gone for ever. A regular mirror is said to describe the modern progress by which Africa is being brought right into the stream of the world-wide circulation, not in any day-to-day sense but rather as a whirlpool in which new ideas and values are all mixed up together, as water is the human contact through which they reach the bewildered African.

The way in which he tends to react to these disturbing new influences is not by flight, but rather than any marked difference from the common stream of perplexed and imitative human kind. If the madda comes, the vivid pleasure.

There is a struggle going on all round us, as there is all over the world, new things are struggling to be born, and old evils are struggling to possess them. It is a struggle in which the state is to be defeated.

There is a struggle going on all round us, as there is all over the world, new things are struggling to be born, and old evils are struggling to possess them. It is a struggle in which the state is to be defeated.

Materialism and Bitter Nationalism

We Europeans demand that the Africans should pay for their education and for their money into Africa to pay for these things, we demand that we see our corrupting power. The best paid job, the modern house, and the best of the modern world, all these things become terrible desirable. Money makes something better.

An insatiable love of money and the things that money can buy, a demand for education and money, a well-paid job, industrial strikes and political unrest. There is nothing new in Africa about these things. They have been seen in an African setting, they are a reminder that while slavery in the old form has died, the subtle modern forms of materialism and bitter nationalism impose a new kind of bondage on the heart and mind of the African. It is another missionary's duty. Our duty today is not with the bad old things but with the bad new things.

Christian missionaries were the first to teach the African to read and to think. In so doing they unconsciously began a revolution in the African's mind. The African is prepared to sacrifice almost anything for education, which he maintains is essential to his intelligent participation in any development project. The mass educational movement which the Government itself is initiating in Africa has been made possible by the aid of Colonial development only through generations of missionary education. It is Christian initiative which has demonstrated the African's capacity for mental and spiritual growth and responsible leadership.

Forgotten the Human Material

As that great friend of the African, Edwin Smith, warns us, there is a danger that in this predominantly materialistic age the human material may be taken insufficiently into account in the new development schemes for Africa.

Our minds are preoccupied with plans for a New Africa, we are not in danger of forgetting the Africans. It is almost forgotten that if there were no people there would be no need for any plans or any development. It is the end of our planning to be the production of large numbers of docile cows or pigs or flourishing cabbages

of opportunities of happy times and of a living full and adventuresome lives.

The Government scheme for mass education will in no small measure depend on the Christian African. Without a spiritual revival, social uplift and a positive love to rise the whole man. A fact often overlooked is that to teach a people to read is to open their minds to a wealth of new ideas and influences, evil as well as good. It is a great thing to have developed the African's ability to read, and to have stimulated a growing hunger for books and papers. From all parts of Africa come urgent requests for vernacular literature for every type of reader. If the Church fails to meet the African's hunger for books, the demand will be met by other forces and to the neglect of the printed word in forming the minds of men and women and children.

From Britain comes his warning and suggestion. To read our failure to provide literature has a failure to understand the expanding needs of man's spiritual language is the tool of thought. It is suggested that there should be provided a permanent School of Literary Arts for the teaching of languages; the planning of libraries; the production of manuscripts. Here Africans with literary talent would be trained by a qualified staff on one or more of these branches: selection, translation, and other.

In British African Colonies only a very small percentage of the people are literate, though some of that small percentage have reached a very high standard of education. The discrepancy between the educated minority and the illiterate masses has one of the greatest social causes of trouble. The illiterate are a drag on the progress of the land.

Influence of Christian Missions

The impact of the Christian mission in Africa today is not only a tremendous influence through the promotion of literacy, not only to prepare a way for the Gospel among those not yet evangelized, but also to affect the whole character of the new literature which will be the result of the influences in the shaping of the new Africa. Among the recruits needed for this work are those with editorial and journalistic gifts, authors, translators, and others who could develop, edit, and print work above all, men and women who can call out and foster in the people themselves the ability to write and thus to create an indigenous literature.

The missionary has made a deal with the Government which is rapidly becoming conventional. The missionary who is thinking increasingly on the lines of the more advanced areas of the world, and he has been prepared to relax Christian and world problems in his presentation of Christianity.

What is the kind of question that the students are asking the missionary today? "Don't you think Communism is more suited to us than democracy? After all, Communism is always telling us how backward we are. Russia was just as backward. We look what she has done for herself."

Do you really believe that Communism is meant for us? Don't you think that all Communism is more suited to us than democracy? After all, Communism has never had no suggestion of color prejudice. Christians say they believe in the brotherhood of man, but they don't practice it."

The young Africans who come to this country to study, many of them educated in mission schools, will in many cases be the future leaders in Church and State. With their experience of life and contacts here in England, increase their understanding and respect for our so-called Christian country. Or, will they go back

* These passages are taken from the annual report of the Church Missionary Society.

eminent and disillusioned alienated from the Church and Government and resentful of any close association with the British?
No longer can we think of Africa as a backward race, but rather as a nation in the making, with all the tensions, perplexities, and ethical impatience of adolescence. A youth politically undeveloped, Africa to-day has become self-consciously and vocal.

The question of nation-making drives us back over and over again to the all-important question of training Christian African teachers. This in turn hinges on the urgent need for educational reform. Because of the continued dearth of men and women for key posts, the Church in East Africa is losing its great opportunities, to the disappointment of the African and the Government.

Contemporary East and Central African Painting

Mr. Maurice Collis Reviews Two London Exhibitions

IT IS A COMMONPLACE to speak of the great influence exerted by certain masters of African art on the course of European painting and sculpture. In the first decade of this century paintings were moving away from impressionism and the older direct representation towards a new kind of abstraction which came to be called cubism, and in the same decade has a wide meaning. Picasso and the artist and writer who surrounded him began about 1907 to study intensely the West African carvings which had come to Europe. The ethnological cases of the museums were full of them, and private persons had examples in their possession.

The dealers, finding the demand rising for such objects, bought many more from agents, and soon Negro sculpture in general was sold in the most fashionable art shops in Paris. The time, however, was called a craze, but it did come to stay, and it is not too much to declare that the great modern painting masters who produced the powerful bas-reliefs and other objects that enriched their remains, and suggested possibilities of supernatural beings, have had as great an influence on the progress of European art, as had the Italian masters of previous centuries.

It is interesting to reflect that the museums have never taken from their collections that last century art is only of ethnological interest, and to this day the British Museum has rearranged the show cases in which they are all jumbled together like carvings. Contemporary art has continued to develop, but with reference to the academics.

In addition to this aspect of old African art, the discovery was subsequently made of cave paintings of different sorts in various parts of the continent. These were seen to be related to certain other modern movements. Their relationship to the European cave paintings in Spain was also realized, and recently a number of books have been published which explore the subject and raise a number of questions which British in London have been found in suppressing interest.

Reflection of Old Ideas

A body called the Institute of Contemporary Art, which was founded last year by a number of leading critics and connoisseurs, held during December and January a large exhibition of African sculpture and a number of cave paintings, which were placed beside certain modern paintings and sculpture, with the object of showing the close connexion which existed between them. This exhibition, which was well attended, was considered to be one of the artistic events of the year.

Mr. Maurice Collis, a leading art critic, has been commissioned by EAST AFRICA and RHODESIA to review the recent exhibition of art by pupils of the Cyrene mission in Southern Rhodesia and students of Makerere College in Uganda, in order that the territories and institutions might have the benefit of the views of an independent expert. Mr. Collis is a contributor to "The East and The West," "The World of Art," "Observer," "The

It was realized that these West African carvings and cave paintings were the reflection of ideas and circumstances which had largely passed away. It was not, indeed, so believed, or felt, that contemporary African art had anything to do with the cave paintings, were of great antiquity, and had no relationship at all to existing races. The carvings, though much less antique, were not continuing to be made with the same intensity of feeling, because of the change of situation which intercourse with Europe had brought about.

It had happened in India and other places where the heirs of an old civilization were shut by 1900, at things from a Western point of view, the foundations of African art were undermined and a serious possibility seemed likely to arise, all was brought, the more in fact unlikely that any contemporary African could produce works of art.

This view was, however, scarcely possible, was proved in January by the exhibition of paintings and carvings by the mission of the Cyrene mission in Southern Rhodesia. It happened when the exhibition was announced, it was thought that some of the best European type were all that was likely to be seen, and that the standard in general would be possibly be low. When we entered the exhibition we were aware that some of the other Canon Paterson, the head of the school had arranged and displayed, with his own native sensibilities, but had so put them at their feet that they were able to express themselves with an unselfish simplicity.

Phenomenon of Cyrene

But his own account for the high quality of their work. The design and colour was professional to a remarkable degree and when combined with the fresh approach and unhampered approach shown by these young men resulted in the production of genuine works of art, not powerful or dramatic like the great carvings of the West Coast, but pleasant imaginings which had the sort of them to be found in Russian drawings and designs.

It is impossible for us at present to explain entirely this phenomenon of Cyrene. It may be that Canon Paterson's material was particularly good; that the Makabele and others (though he is apparently no artistic past) possess a temperament which when it was given the opportunity blossomed into a natural flower. It may be that he was particularly favoured by coming across a number of superior talents. Perhaps it was a moment of transition and his students had not yet reached the period of semi-Africanization which had begun to afflict the native inhabitants of other parts. The fact remains that Cyrene was a unique existence, soft and African contemporary art, and the existence which has so far and which possibly will be a unique future, but which is a real national phenomenon of the African continent.

Soon after its close this exhibition, which owed its existence to funds provided by the Society for the Propagation of the Gospel, it was announced that the Government of Rhodesia had agreed to contribute

Relations between School and Home in Africa

Hope Lies in Increase of Managable Homes

THE 'CRUX' of my third topic, the relation between school and home in Africa, may perhaps be seen in another reminiscence.

It was once driving out of Kampala at about 3 p.m. when children are going home from school. About two miles out I overtook two little boys and gave them a lift. I asked one of them how far he had to walk home from school. He told me 10 miles. (This, if true, was an exceptionally long way, but walks to school of five or six miles are not uncommon.)

To get at school by 9 a.m. he must get up before daybreak and start without any breakfast. Morning school was from 9 to 12.30. During the week till 2 o'clock he had no lunch, since food was not provided at school and his mother couldn't give him any food with him. (The local staple food, banana, spoils so it is not easily portable.) He worked again from 2 to 4 and then started to walk home, which he reached very sunset.

When he got home his mother would give him a little to eat, but his real meal was the big family supper considerably later. After that he would, I hope, be suitably drowsed by his bulky carbohydrate diet, and I supposed that he could sleep it off and get a fairly good night's rest, but no, he told me, he must go to some place where he went to bed. How he could work in a dark hut, probably lit by one kerosene lamp, I don't know. I am sure that the effort to do so was improbable.

Anyway, this little boy of 11, who looked undersized and in need of good food and much sleep, on each of five days of the week had 20 miles' walk, about six hours' sleep, and one good meal. The effect which he received was not a good one, but he had no doubt that it was the only thing to go to school. This was an exceptional instance, but I think that not an exaggerated idea of the hardship which such a schedule imposed on the very strongly.

Unfamiliar Routes

The fact is that the routine of a child's life in a village does not fit the normal routine of an African country, home, especially in regions where the people are scattered over the countryside and not in villages. The traditional peasant's life, though it may have its times of stress, is on the whole a leisurely life, which makes a low demand on vitality and nervous energy, nor does it produce much of these.

On children bred in this environment school life must first impose a very deliberate strain, and many of them miss the more than they gain by the attempt to cope with it. Parents and other relatives make great efforts to ensure schooling for their young, the one effort that is so often and so tragically lacking is so to modify the arrangements in the home as to give the children the strength and support which they need if they are to take real advantage of the opportunity of education at school.

The biological value of education must be found in its effect upon the parents of the next generation. This is where the special importance of girls' education lies. The domestic custom is particularly hard to change, and the young wife is expected to the full force of the conservatism of older women who resist new fangled ideas.

The chief hope lies in the gradual, the unanimous change in Africa, which economic change is encouraging in many of its Christian teachers for their view, not of

joint responsibility between mother and father for the children, must be expected to develop. Until the fundamental human relationship is firmly established, the predicament of thousands of these children of two worlds must remain perilous.

This predicament was first brought home by one of my rare parental interviews at Makerere. I had asked an old chief, the father of one of my pupils, to come and see me, so that we might talk over a rather difficult decision that must be made about his sons' future.

This old man, the head of a composite establishment and father of many children, duly called upon me. We first talked of interesting old days in Uganda, and then we came to the point at issue, I stated the case as clearly as I could, and waited for the chief's comment. He looked at me and said: 'You are his father, and his mother has had his children educated, all his responsibilities are on me, he very courteously took her leave of me. I soon found, to my embarrassment, that I was forthrightly the spokesman of a varied, but not a few, and several, downy eggs.'

Co-operation Between Parents and Teachers

I do not offer this as an instance of successful co-operation between parent and teacher, but I am quite sure that more of that co-operation is very badly needed, especially for the sake of children who attend day-schools, that is, those vast majority of those who go to school.

It may not be at all easy. The schoolmaster has his own special life after, and much of his pupils' lives, going away with him. Many parents may not welcome him as a caller. But more of his time and energy must be spent in acquainting himself with the conditions in which his pupils live, and in seeking the co-operation of the parents to make their children fit to be taught in the school as pupils.

My emphasis has been throughout on personal contacts, both in the general points of problems, however, and in the sometimes trivial incidents by which I have sought to illustrate them. I have not touched at all upon any of those most technical educational problems with which the Educational Adviser's department at the Colonial Office and all its committees, as well as the departments of Education in our African Dependencies, are constantly and most industriously engaged—the problems of the finance, the staffing, and the structure of our Colonial educational systems, of the content of education, the design of curricula, the methods of selection for entry to the schools and colleges. I have not even essayed to define the ends of education.

Importance of Personal Relations

These omissions are intentional, partly because in one short lecture it would be rash to tackle these difficult and complex matters, partly because so many of my audience could deal with them much more ably and authoritatively than I, but mainly because, by few means in East Africa, with all their limitations, enlargement of experience, have impressed more strongly upon me the primary importance of the personal relations which, in some of our work, we seem to establish. That impression, I believe, is stable, and I hope that the many friendships which are a part of it will help me to keep it vivid in my memory as long as I live.

I believe that the multiplication and widening of good human contacts is the necessary condition for the success of each one of the bold plans which are to-day being made for the economic and political development of Africa.

African society is traditionally made up of a number of groups of people of varying size, each strongly cohesive by ties of kinship, and inculcating into its members a firm sense of duty which begins and ends at home. Into this Native population, strong though still comparatively and in a minority of enterprising migrants have been injected. These social contacts have brought with them new divisive factors, or rival economic interests, of various, but not unimportant, and I am bound to add of a somewhat very hierarchical official structure.

The result is naturally of considerable instability. I can prefer some struggle in human affairs, and look upon conspicuous injustice in them as a social suspicion. But it must be a hopeful and not a pessimistic middle; that is to say, some general pattern must be discernible through the apparent confused maze.

I do not believe that planning alone, however masterly, can achieve this. There must also be a keen effort in the

(Continued on Page 7)

Being the concluding instalment of a series of Mr. G. Turner's addresses in London for a series of meetings of the Royal African and South Empire Societies.

Control and Improvement of Nile Waters

Egyptian Cabinet Approves Scheme

A MAGNIFICENT AND FRUITFUL ENTERPRISE in international co-operation and a contribution not based on strategic considerations nor conceived primarily for commercial profit. Thus Mr. Hector McNeil, Minister of State, in a speech to the Anglo-Egyptian Society in London on Friday, described the decision of the Egyptian Cabinet to co-operate in a comprehensive scheme for control and improvement of the Nile waters.

The first step's participation with the Government of Uganda in the construction of a dam at Owen Falls by which the waters of Lake Victoria will be raised to 1.3 metres above the maximum flood level. The Egyptian Government will contribute £24,000,000 and the Uganda Government £8,000,000 to this work.

Had this agreement not been reached Uganda would have adopted a modified scheme which would have provided the power required without affecting the Nile water agreement of 1929, by which Egypt's consent is necessary for any irrigation or power works, which would entail any prejudice to the interests of Egypt.

The present plan provides for the construction of a dam at Owen Falls with six turbines each producing 15,600 kW, but the foundations and housing will permit the addition of two more similar turbines. It is estimated that 420,000 kW is the maximum power which can be provided without wastage of water.

The full scheme for the control and improvement of the Nile waters, by which maximum benefits would be obtained, would take 25 years to complete. Additional works would include a dam at Muff in Belgian territory by which Lake Albert would become a balancing reservoir; regulation of the waters of Lake Kyoga in Uganda; a diversionary canal of some 350 kilometres from Jonglei in the Sudd region of the Southern Sudan, where nearly half the water is estimated to be lost by evaporation and plant transpiration; a storage reservoir between Abbara and Wadi Halfa; and a dam at the outlet of Lake Tana in Ethiopia to form a reservoir for the Blue Nile.

Power for Uganda

All the territories concerned would gain substantial benefits. Uganda will be provided with power for her industries and those of adjacent territories. The Sudan, whose water supply is still limited by the 1929 agreement, would be in a position to expand the Gezira cotton-growing scheme, the most successful peasant co-operative venture in Africa. At present the average under-cult in Gezira is about 1,000,000 acres, but it is estimated that a further 1,500,000 acres of land in the Sudan could be irrigated for cotton production if the water were available. The Sudan is greatly concerned with the control of the Blue Nile, the waters of which at present are so heavily laden with silt in times of flood that control works are difficult. The dam at Lake Tana would obviate this, and would provide Ethiopia with a source of electric power.

Egypt would be the greatest beneficiary and would secure stabilization and increase in water available for irrigation. This is essential to provide for the rapidly increasing population.

Concluding his speech, Mr. McNeil said: "The next stage is the provision of capital. Even here I do not believe there will be much difficulty. The funds are accessible. The scheme will mean real wealth—power, minerals and services like transport—for millions of people."

Great Britain values Egypt's friendship, and offers her friendship in the strains and stresses that lie ahead for both of us.

Crop Problems in S. Africa

Results of Severe Drought

LATEST REPORTS on the crop situation throughout southern Africa suggest that although the advent of the rains has averted an extremely grave situation, yields will inevitably be much lighter than was anticipated last year.

In Nyasaland, where the drought conditions were described as the worst since 1922, emergency measures were taken, as already reported, and the recent rains have not been heavy. The situation is worst in the south, although even in the northern and central areas the crops are expected to be well below average.

In Southern Rhodesia both maize and tobacco are expected to be light crops; the latter's yield will probably average 430 lb. to the acre, against a total crop of 87,000,000 lb. compared with last year's figure of 130,000,000 lb. This situation may therefore be expected to have some repercussions upon the amount available to British manufacturers, who last year signed an agreement to buy over a period of five years, two-thirds of the Southern Rhodesian fire-cured crop up to a 70,000,000 lb. crop, with a minimum purchase of 40,000,000 lb.

The Nyasaland correspondent of the *Sunday Express* reported this week that the rain, which was too late and came too late, "has been followed by a failure of the root and maize crops. In some districts the Natives have been making a meal of grass seed and the bulbs of water-lilies. It was announced to-day that maize meal and grain is to be rationed to 1 lb. a day for each person."

Removing Unnecessary Population

"Employers in Blantyre and Simba have been asked to cut their African staffs to the minimum necessary for essential services, and to remove all unnecessary population from the area. The Government has ordered all areas to be planted with quick-growing mandarin root and sweet potatoes."

Nevertheless, the Nyasaland Office in London pointed out a few days ago that many of the emergency measures taken by the Government in the Protectorate were of a precautionary nature, and might tend to exaggerate the overall picture. Since the crops would not be harvested for a few months there would in any case be a certain shortage of food at this time.

Earlier reports from Southern Rhodesia had stated that before the rains fell the situation in that Colony varied greatly. In the Mazoe Valley maize was seriously affected, whilst in the Midlands the Fort Victoria area was badly hit. Many of the farmers were more fortunate, but the drought negated the more early planting in the Norton-Hatch district. Many farms in the north-eastern districts of Capricorn had no rain for nearly three months, and were unable to plant anything.

Reports from Northern Rhodesia have been relatively encouraging compared with other misgivings. Special measures have, however, been taken by the Government, including the rationing and price control of cassava and cassava flour, which will become part of the basic ration, as well as the rationing of maize and maize meal, apples, and the prohibition, in the Central Province, of the sale of any Native foodstuff by Africans to non-Africans.

An African policeman in Bulawayo recently won a competition in Mapotla on the subject "How I would overcome the skidman menace." His suggestions included: establishment of additional beer halls near the towns, a change in the hours of drinking, to enable unemployed African, and not the tourist, to take advantage of their propaganda show. Africans, he stated, should be a poison and restriction of the sale of yeast, by supplying it only on a permit, and an official permit.

D.N.O. Mission's Report on Tanganyika

Unrealistic Proposals Widely Criticized THAT EUROPEAN COLONIZATION IN TANZANIA should be curtailed is one of the recommendations made by the recent United Nations Trusteeship Council mission to that territory which has aroused widespread and thoughtful criticism in East Africa.

The mission recommended that strict control should be exercised to keep European colonization "at the barest minimum consistent with the development of the territory and the present and long-range needs and interests of the African inhabitants."

The plan to form a customs union between Tanganyika, Kenya and Uganda, which has already been criticized in the Trusteeship Council, is, however, regarded by the travelling mission as "not prejudicial to the interests of the three territories from the point of view of administration."

The members of the mission, who carried out a six-week study of the Territory's problems, were the Henri Laurentie (France), Mr. E. W. P. Chinnery (Australia), Sr. Li Mousheng (China), and Mr. R. E. Woodbridge (Costa Rica). Among their findings are the following:

Mission's Findings

Agriculture: Erosion, deforestation and the general impoverishment of the soil constitute a grave threat to the life of the people. The administering authority (Britain) should provide more technicians and facilities.

Mines: It is extremely important to determine whether the territory and its inhabitants are receiving fair returns from the exploitation and impoverishment of the Tanganyika subsoil. The authority should give the Trusteeship Council exact details and statistics of its revenue from all mining operations.

Land: All the mission land not now required for churches, hospitals, schools or other social or religious services should be returned to the Africans. Further European settlement in Tanganyika should be limited and all former German estates should be given back to the African on a co-operative basis.

Labour: More schools, hospitals and public health facilities are needed to raise the efficiency of the African workers.

The mission urges the abolition of penal sanctions on workers who use "abusive or insulting language calculated to provoke a breach of the peace" and who "unlawfully leave" their employers. African workers are regarded by the mission as being underpaid, and concern is expressed about the "proposed Labour Utilization and Supply Bill" which appears to threaten the rights of labour.

Press Reaction

Dealing with prisons, the abolition of corporal punishment is recommended, together with the reduction of the solitary confinement period.

The European Press in East Africa has commented at length upon the mission's proposals, characterizing them as unrealistic. Without the stimulus and ability of good quality white settlement and the encouragement of white enterprise and investment for development, it is pointed out, Tanganyika would stagnate and be unable to provide from its own resources the social services regarded by the mission as inadequate to-day.

The East African Standard writes:

When, from the beginning to the very end, the decision of the present British Government to give Tanganyika to U.N.O. as an international trust was taken, the implications of the report made by this mission reinforce that object. The decision to place Tanganyika outside the British Commonwealth and Empire, despite the fact that in two world wars white and African troops, side by side, had fought and died for the Territory, was taken without consultation with the people or with the Governments and peoples of adjoining British Commonwealth countries, both north and south, whose interests were affected and might be prejudiced by that decision.

In this report, catalogue of criticisms there is much that white people who have lived in East Africa for far longer than six weeks will agree. Some have been trying for a lifetime to find the answers. They did not need to be told the soil erosion, deforestation and general impoverishment of the soil is a grave threat to the life of the people. They do not need to be told that more technicians and facilities are needed, nor that more schools, hospitals and public health facilities are required.

These are the very problems with which the British Government and the British settlers (and more so the intelligent Africans, too) have together been struggling for years to solve from the limited financial resources provided by their unaided efforts to develop these vast backward areas and improve the condition of millions of people whose generation removed from slavery.

More Not Less European Colonization

When the mission urges that further European settlement in Tanganyika should be limited, that and already advanced including areas already developed by the pre-war German settlement should be given back to Africans, it is urged to remove from Tanganyika the most important stimulus to the progressive development of the land and its native people and the achievement of those very social services the inadequacy of which is criticized. The whole wealth of Tanganyika has been that British settlement is not sufficiently encouraged, and that there is no proper official plan for its expansion.

The needs of Africa and the Native peoples require, nevertheless, European settlement of the right kind to create and preserve for Africa the way of life which Western civilization has formed for the civilized and free people of Europe. Africa needs, too, the rapid development of its industry, modern life, social services and African unity and advancement are to be made possible, if the grave problems of land distribution and population pressure are to be solved, and if the world is ready to benefit from nature's resources in the backward part of Africa.

The criticism has also been made by Europeans in East Africa that the mission made no reference to the economic or political results of growing Asian settlement, though at the present stage of the African's progress the Asian artisan, clerk and the small shopkeeper are the principal competitive obstacles to his advancement.

[Editorial comment appears under Matters of Moment.]

Law Not Justice

IN HER LATEST BOOK, *The Sorcerer's Apprentice's Territory*, a district commissioner who heard rumours of the murder of a woman by a sub-chief, who admitted the charge, explaining that he had killed her because she was a dangerous witch and a menace to the community. He led the D.C. to the spot where her bones were buried, and witnesses testified that the sub-chief had publicly announced his intention of killing the witch, and that they had heard him say he had done so. The culprit, properly punished, made a full confession. When the case was heard by the High Court the man was acquitted on the grounds that there was no medical proof that the woman's bones were human, that the evidence was circumstantial, and that confession to a magistrate was not fatal.

Where There's a Will

A Nyasaland correspondent wrote recently in the *Rhodesia Herald*: "Some African peasants have become so rich, and some African standards, wealthy men. One of these Lilongwe recently wrote to a solicitor in Blantyre to say that, as he was now a rich man, he wished to test a wife - how was he to set about it? A standard will form was posted to him; with full instructions. In due course the will was returned by the solicitor with the covering note: 'You told me I must get two people to witness my signature. As you can see, I got six witnesses. But as none of them can write, I have signed their names for them.'"

Talks on Central African Federation

Sir C. Huggins Meets Mr. Welensky

CENTRAL AFRICAN FEDERATION is being discussed this week at the Victoria Falls by Sir GODFREY HUGGINS, Prime Minister of Southern Rhodesia, Mr. R. WELENSKY, leader of the non-official members of the Northern Rhodesian Legislative Council, and representatives of Nyasaland, together with other delegates from the territories.

The first meeting took place yesterday, and it is understood that Sir MILES DUNN, Chairman of the Southern Rhodesian Development Co-ordinating Commission, is presiding. Northern Rhodesian delegates include Mr. G. B. SECKETT, M.C., Mr. J. F. MORRIS, M.C., and Mr. A. A. DAVES, M.L.C. Sir Godfrey is also sending special observers, among them Sir STUART GOMB-BROWNE, Mr. G. PALLETTIER, and Mr. W. N. WATSON, Nyasaland has three representatives attending.

Further Conference Possible

Sir Godfrey Huggins said recently that if the discussions were successful, a further conference would be held later. Provided that general agreement was reached, the representatives at the Victoria Falls would have to determine the functions of the federal government. Any subsequent discussions, details would have to be worked out before an approach could be made to the British Government.

Considerable interest has been aroused in South Africa by the conference, and proposals are being made to a proposed federation known as "Common Africa", a Dominion with a Native population of 5,000,000, and a steadily increasing white population. The Dominion would, in addition, link with Kenya, Uganda and Tanganyika.

Interest has also been stimulated in the United States, and the head of the *New York Times* office in South Africa has flown to the Victoria Falls to report on the conference.

At the news of economic press, it is now known whether Mr. R. W. Greener, the leader of the Liberal Opposition in Northern Rhodesia, is attending.

The *Daily Telegraph* in an editorial, written yesterday, said:

For over 20 years there has been a movement to join together these territories, with or without Nyasaland, to do the possibilities of forming a new Dominion, which has been called Capricornia. It seems the more attractive because of an effort to develop the continent as a new lardest for the world. It appears to be well to do this. It is a fine idea, and the States of South Africa agree that many of its ideas, but the desirability of strengthening bonds in a group of peoples more certain to adhere to the Commonwealth.

White Territories

The Northern and Southern Rhodesias—the one Crown Colony, the other self-governing—differ widely from one another and still more definitely from the Protectorates of Nyasaland. Southern Rhodesia is the most advanced, but at the time of the 1940 census had 822,000 white inhabitants. Northern Rhodesia under 32,000. Nyasaland fewer than 200,000 as against about 440,000 Native population in each territory. There is no doubt as to the desirability of forming a new white central dominion, but black subjects on the other hand, no one would suggest that the Native population of Southern Africa is ripe for the vote or for social equality with the white man.

A federal Dominion in which differences in the policies prevail in the three States is a theoretical possibility, but agreement that centres at the Victoria Falls conference will certainly require further study.

The Rhodesian correspondents of *The Times* commented:

The chief stumbling block to closer union has been the attitude of the British Government in its capacity of sponsor of African interests. In Northern Rhodesia there has been general dislike among Africans for assimilation with Southern Rhodesia (based on the fear that it would lead to the imposition of the latter's white policy).

It is largely an "unwritten law" in Southern Rhodesia, has no cause to be ashamed of, but the ill-effects of which is the "ill of whites" by which minimum wage and

welfare conditions are laid down for Native labour in commerce and secondary industries. In Northern Rhodesia Native labour is also largely engaged by the conservation of the African, with a reluctance to see any change in the form of government to which he has become accustomed. Whatever the reasons the fact exists, and the British Government has had to take note of it.

Hence the wish from the idea of assimilation in a federation, for federation would give each territory control over its own domestic affairs and yet enable it to play its part in the application of policy affecting all territories alike. Both Sir Godfrey Huggins and Mr. Roy Welensky would prefer assimilation as the simplest method of achieving closer union. They realize that federation is the solution.

Commenting recently upon the proposed discussions, Mr. Welensky said that the purpose was to explore the problems facing a federation, and to agree what common policies would come under the federal government.

As regards the type of federal government, which will have to be considered, he added: "I can give as a comparison the American form and the Australian. I would not emphasize that federation gives each a number, but a greater chance of retaining its individuality than any other form of closer political union."

The only policies to be placed under the control of the federal government, Mr. Welensky pointed out, would be those agreed by the respective Legislatures. In his opinion, it was essential that the federal government should have sufficient power to tax for the services for which it is responsible. If the federal government was, for example, responsible for defence, and main roads throughout the three territories, it would be necessary for limited powers to be afforded to provide these facilities.

African Affairs Would Be Safeguarded

Reference to the plebiscite promised by Sir Godfrey Huggins to the people of Southern Rhodesia, Mr. Welensky said that Northern Rhodesians would themselves have to decide whether they had a right to a plebiscite. One part of the link-up would however entail a plebiscite for Africans and Africans. Since 90% of the Natives were illiterate, this would be a fantastic and impracticable one did not know what the African attitude towards federation would be. African rights could be safeguarded under a federal government, but it would be hard to realize that they were working in a changing and a industrial age when people either flee with the machine or disappear. Africans should consider very carefully the choice that is being offered if they made up their minds to oppose federation.

The *Daily Telegraph* says, said Mr. Welensky, made it impossible to create a political union with South Central Africa, but was recognized by everybody from Field Marshal Montgomery to Ghandi. It was inevitable, and it was inevitable. It had been suggested by some who sought a more serious basis for federation because of Northern Rhodesian opposition. Proposals, but this properly was a fact-based upon the high price of copper. That appeared to have a specific future for at least a few years, but no one could see beyond that. In any case, except for the limited powers of taxation, noted in the federal government by the respective Legislatures, Northern Rhodesia would stand its own ground as to its development as a Dominion.

In the British Dominion is to play its part in the development of Africa, concluded Mr. Welensky. The time for piecemeal change has passed. It is clear that the South States will be 25 years in a mainly challenge South Africa, a link of friendship of the central and southern portions of African continent.

BACKGROUND

Imperial Preference. There is no doubt that foreign trade as such, when acquired with a foreign power each acquisition is balanced by a corresponding loss. This is not the case when we trade with a partner in the Commonwealth. The same exchange takes place, but the commodities exchanged remain at the disposal of the Commonwealth as a whole. If we sell a locomotive to Mexico, we may obtain a certain return, but the locomotive is no longer of use to us. If we sell a locomotive to New Zealand, we not only obtain part of the cost, but the locomotive is still in the Commonwealth for use in peace or in war, to serve the common cause. The dollar shortage will compel the direction of an increasing part of our trade and investment into Commonwealth channels. No doubt, the capital placed in the Argentine and China gave a better return to its investors than it would have done if placed in the Commonwealth. The millions of Anglo-Saxon emigrants to the United States may have done better for themselves there than they would have done had they gone to the Dominions. Yet the Commonwealth as a whole has suffered sorely by the diversion and loss of these forces. They might have been used to develop its wealth and power; instead they have raised up competitors against it. Our aim should be to harness the economic energies of the Commonwealth nations to the task of their mutual development. This aim can be fulfilled only by the broadest possible application of the principle of Imperial Preference. If a strong Commonwealth is a primary interest of the United States, we ought to accept the principle of Imperial Preference will have to be accepted. There is no other road to economic recovery for the Commonwealth and even if Preference were to impose some sacrifice upon the United States, it would certainly cost them less than the continued loans and aids with which they would otherwise have to provide us. This point is further emphasized by the conception of the Marshall Plan, under which the aid to Europe are deliberate sacrifices made to discriminate against exports from the United States. The principle of Preference, thus newly gaining acceptance in Washington as a condition of European economic recovery, and which is admitted by Europe, cannot easily be denied to the British Commonwealth. There is no need for the Conservative Party to be alarmed at the effect of this budget.

Britain's Recovery. Britain is making a great and admirable effort of self-discipline and sacrifice to win the peace-time battle of the dollar gap. There is no justification for any feeling that Britain is not willing to do her full part in the economic cooperation in Europe; nor is there any justification for any feeling that the organization for European recovery should have moved more rapidly than it has in its first year. In a short period of time considerable progress has been made. To be sure, considerably more remains to be done, but I believe that the British will do their full part in seeing that it is done. Britain has a real chance of getting herself in an approximate balance on dollar account by 1952-3, provided that world political and economic conditions show some reasonable improvement for the next three years. The big question mark is whether she can increase her exports to the western hemisphere for 1952-3 to the pre-war level. The difficulties in the path towards this export target are enormous. All the countries which are short on dollars will be bidding at the dollar market, and so of course, will that first formidable competitor of all, our own country. No one can say whether Britain can surmount these difficulties, all that can be said is that the British are determined to try it. So far, they have shown that they mean business. Mr. Thomas K. Finletter, head of the Marshall Plan mission to London.

The Film Industry. At present British films contribute £12,000,000 in taxation to the Exchequer. If, as is suggested, the Exchequer would hand back £4,000,000, then the film industry would be able to make good the difference. It is to be noted that the taxpayer is required to do this. He is entitled to a refund, which means no way of making film production a profitable concern. He is entitled to point to the fact that a film producer can show a loss even though his film grosses nearly £1,200,000 at the box office. He is entitled to ask whether, even with the present entertainment tax, those gross proceeds will not be divided between artists, exhibitors, distributors and producer, so that all three might prosper. In other words, if the industry organizers take so as deliberately to starve its own creative section, should the taxpayer come to the rescue until a more equitable re-organization within the industry has been attempted.

Miscalculations. Mr. Churchill has voiced the alarm not only with indignation, with which taxpayers must view the supplementary estimates just presented. The real surplus for which Sir Stafford Cripps budgeted was £370 millions. The supplementary estimates total £221 millions. Is this not a very important change? In the old days it was a source of proper pride that our Budget estimates were astonishingly accurate. Any Chancellor who would be so very wide of the mark was not considered up to the job, but what can be said to-day of estimates which are £38 million (10%) out in the case of the Ministry of Health, and £50 millions (16%) out in the case of the Ministry of Food? No doubt Mr. Bevan will say that the cost of a new service was bound to be guesswork, and Mr. Strachey will repeat his usual crack about the terms of trade being against us. Nevertheless these possibilities ought to have been at least in part foreseen, and such estimating is discreditable to the Ministers concerned and may prove disastrous to national policy. The second charge is that the estimates show culpable differences to the national resources. The first shows the "drying-up" need for production through the reduction and reform of taxation. Every authority agrees that reduction of taxation can best be secured by Government economy. But these supplementary estimates, added to the new expenditure already provided for, might exceed the total economies foreseen by Sir Stafford Cripps during the current year. How, the surplus such as it remains, will have been scoured by an insatiable capital levy which the Chancellor is not at all likely to do. There is no criticism in principle of part of the purposes for which the money is spent. It is healthiest to be in the work of the parties. The people must have food, to be able to draw materials to work. Such figures, however, not only cause us to have suspicion of some mismanagement, they may also create abroad a most unfortunate impression, particularly amongst those who are giving us dollars that our Government agrees with Mr. Greenwood's description of "panda-shifting" and "panda" as meaningless symbols. The only consolation in the present figures is that they may at last reveal to the people that they must themselves pay for what the Government professes to "give" them, and that if they have to pay too much more than they are given, will be a far less unpleasant thing than a far less

TO THE NEWS

E.A.R. marked.—The modern world is truth versus propaganda.—Monsignor Ronald A. Knip.

Modern woman spends some 3 per cent. of her waking hours at the hairdresser's.—Mr. Osbert Peake, M.P.

There is a creeping paralysis of humane decision lying across our foreign and Colonial field.—Lord Millican.

Advertising is its broadest sense the essential feature of individuality.—Mr. Harold Macmillan, M.P.

If there is to be any development of overseas territories it must be on the basis of a partnership between the State and private enterprise.—Mr. W. Fletcher, M.P.

Scotland has a greater spirit of adventure and hopefulness than at any time for the last 100 years.—Mr. Tom Johnston, chairman of the Scottish Tourist Board.

Much of the taxation policy of the Labour Party seems to be based on a net of the Socialism of love, not the Socialism of envy, malice, and all uncharitableness.—Mr. Clement Davies, M.P.

Mr. Bevin is conducting a thankless rearguard action in defence of British interests in the Middle East which include a residual mission of Semites to the Palestine Arabs.—Sir Ronald Sira.

For the last three years I have been trying to find out what are the policy, principles and programme of the Conservative Party. Never in the recorded history of man has there been so great a unanimity in your, if so great a vacuum.—Major D. Bruce, M.P.

Farmers are selling potatoes to Government at 20 a ton and buying them back again at 20 to 25 a ton. In small quantities do not wish to buy at 19 and sell at 18 on the spot.—Commander Stephen King-Hall.

Surely it is time that we made an end against the assumption that never parents are thought to need relief from the upbringing of their children the teaching profession shall be called in as substitute parents.—Miss Winifred Cleary, president of the London Teachers' Association.

Why is it that a nation practically never sees an oxfall?—It is perhaps that Mr. Stachey, tired of being fooled by Senor Peroff, is now buying his oxen from the Isle of Man?—Sir Neville Pearson.

Co-operation is free man in a free community, postulated a very high standard of personal conduct. In practice, however, Socialism tends in the opposite direction. It cannot but encourage the baser instincts of human nature. It cannot be any ahead of the natural evolution of public morality.—Sir John Anderson, M.P.

There is criticism abroad of Germany for four reasons: the failure of farmers to deliver their quotas of wheat grains, the misuse of petrol and electricity, the diversion of materials from house building to luxury building, and hasty criticism of the Ruhr statute.—Major General W. H. A. Bishop, Regional Commissioner for North Rhine-Westphalia.

The figure that Government expenditure is too high is based on no more of the fact than that it is amount for the Government to spend more than 30% of the national income as to the objection that the extraction of so much money from the income producers is killing production.—Association of British Chambers of Commerce.

FOR

Vauxhall Bedford

OWNERS

If you are a careful Vauxhall or Bedford owner, you will have your vehicle too long without having the oil checked to determine if it needs attention, and you won't want to trust to anybody either, but will go to a Vauxhall or Bedford specialist. Ourselves, for instance.

BRUCE LIMITED, NAIROBI

P.O. BOX 954

Sell and service throughout East Africa by Vauxhall, Bedford, and other makes in Mombasa, Nakuru, Kisumu, Malindi, Kampala, Dar es Salaam, Tanga, Zomba, Beira, Bulawayo.

PERSONALIA

MR. R. W. FOOT has been appointed a director of Barclays Bank (D.C.) Ltd.

A son was born in Nakuru, Kenya, recently to Mr. and Mrs. TERRY COWDREY.

MR. BERT H. DE B. STEPHENS was married recently in Nairobi, Kenya, to Miss DIANA MARY HUTTON RIDGILL.

THE DUKE OF GLOUCESTER has been appointed Lord High Commissioner to the General Assembly of the Church of Scotland.

MR. J. G. DANK, of Mitchell Cotts and Co. Ltd. has been elected chairman of the London Hamp Shipowners' Association.

BRIAN R. T. CARLETON HARRISON, managing director of Collyer Industries, left for South Africa in the Edinburgh Castle last week.

MR. F. J. BLAKE is the first president, and MR. J. LARSEN, vice-president, of the newly formed Northern Province Chamber of Commerce of Tanganyika.

MR. H. P. STUBBS, the B.B.C. correspondent in India and Pakistan, is transferring to Johannesburg next month, where he will cover the Union and Rhodesia.

The marriage took place in Southern Rhodesia, recently of MR. BRYSON WILLOUGHBY and Miss MONA HODSON, daughter of Mr. L. M. N. Hodson, M.P., and Mrs. Hodson, of Salisbury.

A children's book, "Pendellions," recently published in London, is the eighth work of MERRA CHARLTON, who in private life is the wife of MR. K. M. MACLEOD, a dockyard manager at Port Sudan.

Mrs. ARTHUR FAWCETT, chairman of the East Africa Women's League, recently underwent a bone-grafting operation in London. She is making good progress and the surgeon is very hopeful of success.

VICE-ADMIRAL M. M. DENNY, who was Captain commanding the cruiser H.M.S. KENYA, which led "the perfect raid" on Vaagso in the Norwegian campaign of 1942, has been appointed Third Sea Lord.

MR. K. M. GOODEMOUGH, High Commissioner for Southern Rhodesia, and Mrs. GOODEMOUGH, left Southampton to-day in the Strathairn Castle for Rhodesia, where they will spend three months' holiday.

The marriage recently took place in Nairobi of MR. RICHARD LEGAT, of Farnham, Surrey, and Miss KATHERINE RHODES, only daughter of Brigadier-General Sir Godfrey and Lady Rhodes, of Nairobi.

A new novel by MR. NIGEL FARSON, who recently revisited East Africa, was published on Monday. It is entitled "Sons of Noah," and describes American life in the twenties, mainly in a small fishing village in New Jersey.

LIEUT. COLONEL E. M. WILSON, who was last year elected unopposed for Ndlovu as a member of the Legislative Council for Northern Rhodesia, has resigned from the Ndlovu municipal council owing to pressure of business.

MR. A. K. HERM, British Minister to Hungary, who has been appointed as the British representative to the Government of Israel, was educated at King's College, Cambridge, and has served in the Diplomatic Service of His Majesty's Government in Addis Ababa.

MR. F. S. JOELSON has been ordered complete rest for some months, and will be grateful if the readers of this journal will direct all correspondence, letters, or editorial notices, and receive prompt attention if addressed to the editor, other than usual correspondence by name. These on business matters should be addressed to the manager, THE AFRICA AND EAST AFRICA, 66 Great Russell Street, London, W.C.1.

MR. DUREK J. MARIS, a Nairobi journalist coming to this country for leave, was one of the passengers on the Skyways which crashed recently near Tripoli, causing the death of the pilot and injuring some passengers.

LORD HACKING, chairman of the British Travel Association and of the Tourist Division of the Tourist and Holiday Board for Great Britain, is visiting Rhodesia, recently having an address in Salisbury on the tourist trade.

The engagements have been announced between MR. GRAHAMING NGWENI ROSE, son of the late Mr. and Mrs. P. A. Rose, of Leicester, and Miss JEAN HELEN LOVE, daughter of Commander and Mrs. H. V. Low, of Korogwe, Tanganyika Territory.

MR. VICTOR ANDRE CORSIANI ROSS, son of the late Mr. Cecil Charles Ross, was recently married in Kenya to Mrs. MARGARET MARY DE G. THURMO, widow of the late Mr. Julius B. G. Delmege and the daughter of the late Mr. S. G. Shillup, of Chalfont, Oxfordshire.

MR. W. A. B. HAMILTON, at present an Under-Secretary and Director of Establishments and Organization at the Ministry of Education, will become an Assistant Under-Secretary of State and Director of Establishments and Organization at the Commonwealth Relations Office on March 11.

DR. EDWIN MILLER, the owner and editor of the Left-wing daily newspaper "L'Observateur," was found guilty last week in the courts of Mauritius, of a charge of seditious brought against him by the Government. A fine of Rs.100 and bonds was imposed, and the newspaper suspended for one month.

MR. MAURICE COLEMAN, art critic of "Time and Tide" and other journals, broadcast in last Friday's Calling Southern Rhodesia programme of the B.B.C. His subject was the Cyrenaic art exhibition. A special review of this and the East African art exhibition by Mr. Collier appears on page 73.

The marriage will take place in Nairobi on March 19 of MR. THOMAS MILLS, only son of Mr. and Mrs. S. C. Mills, of Cokham Dean, Berkshire, and Miss ELEANOR MABEL HARRISON, second daughter of Mr. and Mrs. L. H. Haines Gow, of Harwood, Kentonshire, at present residing at Naivasha, Kenya.

The award of the 1950 Pioneer Association's "golden axe" has been awarded to Mrs. JEANNIE M. BOGGIE, of Gwelo, Southern Rhodesia, in recognition of her work in writing the history and experiences of women pioneers and other narratives in Rhodesia. Her late husband, Mrs. Boggie's latest book is called "Old Nonesuch Rhythms in New Dresses."

MR. BASH THOMAS PARSONS, who has been appointed to the Colonial Service as a field zoologist in the Toxic Fly Survey and Control Section of the Veterinary Department of Kenya, was educated at Lansing College and Magdalen College, Oxford, and was afterwards an assistant demonstrating zoologist at Reading University, and served during the recent war in the R.A.F.

The engagement has been announced between MR. ROBERT YOUNG ARMSTRONG, elder son of the late Mr. T. M. E. Armstrong and Mrs. Armstrong, of a farm field, Surray, and Mrs. LUCY MARGARET WARD, of Umfali, Southern Rhodesia, daughter of the late Mr. H. P. G. Haynes, of Caddell, Turkey, and widow of the late Mr. Arthur Ward, of Southern Rhodesia.

MR. GORDON COOPER has founded and for the first time edited a Rhodesian magazine which is now being published. He was interviewed in his Saturday "Town Talk" programme of the B.B.C. in his capacity as president of the Globe-Trotters' Club. He mentioned that he had visited every country in Europe, except Finland and Russia, and that he had written 24 books.

LONDON and BIRMINGHAM

BRITISH INDUSTRIES FAIR

Britain has long been the world's greatest customer, and has led the way in the export of manufactured products. By initiative in modern research and from experience of commerce with other nations, her industrial production has become greater and more varied than ever in history.

Renowned for the quality of her work, Britain has adopted new techniques to be found in Austria. By enterprise in fresh markets she has achieved record deliveries, and exports production still expanding. To keep in touch with these develop-

ments great numbers of the world's principal buyers are making visits to Britain.

Every year, from over 100 countries, trade buyers gather at the British Industries Fair. The Chambers of Commerce in Birmingham, and manufacturers from every part of Britain join with the British Government to welcome them.

At BIF 1949, from 2-13 May, over thousand exhibitors will display the latest developments in their groups of allied trades. The leading men of international commerce are invited to attend the world's greatest assembly of national products.

2-13 MAY 1949

TRADE BUYERS—PLAN YOUR VISIT NOW

Information about exhibitors, special displays and facilities at the Fair can be obtained from the nearest British Embassy, Legation, Consulate or United Kingdom Trade Commissioner.

Groundnut Scheme Report Still Wanted By Strachey Again (Continued)

THE EAST AFRICAN GROUNDNUT SCHEME has again been the subject of numerous questions in the House of Commons during the past week.

On Monday, MR. A. HURD asked the Minister of Food whether he was satisfied that the 1949 cropping programme for the scheme would conserve the fertility of the soil and prevent soil erosion after the bush had been cleared.

MR. J. STRACHEY: Yes. As the hon. member knows, comprehensive measures are being taken to prevent soil erosion and maintain fertility.

MR. HURD: Will the Minister show the House to-day one of his secrets about the groundnut scheme and that is, what crops are actually being grown in order to attain this purpose?

MR. STRACHEY: This year groundnuts and sunflowers have been planted, but of course the preservation of soil fertility and anti-erosion measures depend upon the crop rotation over a number of years.

MR. HURD: Can the Minister tell us whether any lessons can be drawn from the very small area of ground where groundnuts have been grown for two years?

MR. STRACHEY: I think that the scientific advisers of the Corporation would say that it was shown that it is safe to grow groundnuts for at least two years in succession, but they would not go further than that.

MR. HURD asked if the Minister would expedite the publication of the first annual report of the Overseas Food Corporation, and how soon after March, if the House could expect to see the accounts of the groundnut scheme.

Review of Overseas Food Corporation

MR. STRACHEY: The Overseas Corporation to submit the report and accounts in order that they reasonably can bring them to the normal practice of large undertakings in this instance, I do not commit them to a particular date.

MR. HURD: Does that mean that the House may not see the report and accounts until possibly October or November, or even later, the General Election?

MR. STRACHEY: Oh, no, long before the election, but I cannot really add my answer at this stage.

MR. J. H. HARRIS: Surely the Minister will have a definite time table printed in his matter, is it the responsibility of the State to keep it published?

MR. STRACHEY: I have already stated in the House that would prolong the debate which I understood was going to be arranged through hon. and hon. gentlemen opposite to his matter at an early date as they like.

MR. A. LINDSAY-BOWE: If the Minister is to supply information to the House during a debate, will he not make that information available in advance so as to give us all the opportunity of reading the position?

MR. STRACHEY: I can only repeat what I said on another occasion. I am not willing to ask the Corporation to supply an additional report in the middle of the first year of operations as well as their first annual report. Apart from that, we asked to publish my speech in writing in an advance which is done in novel cases for the House to-day.

MR. HURD asked if schools were now being provided for the children of workers on the groundnut scheme as part of the welfare activities of the Overseas Food Corporation; what proportion of the children were attending; if there were facilities for adult education, and what was the estimated cost.

MR. STRACHEY asked (1) what medical facilities were provided for the Africans employed at Kombe; what provision had received medical attention during the last six months; and what were the cost of medical services; (2) what measures had now been taken at Kombe to improve the educational facilities of the Africans employed on the groundnut scheme.

MR. STRACHEY: I have requested the Overseas Food Corporation, who are responsible for these matters to report to the hon. member on this direct.

MR. HURD: If it not the responsibility of this House and of the Minister to take particular care of the welfare of the Africans employed on this scheme?

MR. STRACHEY: Yes, sir, it is part of the responsibilities of all of us to do that, but it has been clearly laid down that these questions, which go into very considerable detail, should be

answered direct from the Corporation, and that the matter can be arranged in our subsequent debate on the subject.

MR. GYMON-REUX: Is the Minister suggesting that the Overseas Food Corporation is the only authority to consult for that area?

MR. STRACHEY: No, sir, that shows that in these questions, some of which are those of the responsibility of the Tanganyika Government, which should be worked out through the Colonial Secretary.

SIR W. SMITHERS: Is the Minister aware that this morning they had a most interesting letter from the Overseas Food Corporation, and that the point really is that this letter will not appear in Hansard, and that I am afraid of a person who Minister that information?

MR. H. J. HICKMAN: As the Minister says that this is a satisfactory situation, because many hon. members of the House would be interested in this report of the Corporation, and that it is not possible for us to write to the Corporation? If it can be arranged for the hon. member for Newbury (Mr. HURD) to have this information, cannot it be made available to us?

Responsibility for Answering Questions

MR. STRACHEY: If the question is one, which is due to be asked to the Minister with respect to any matter, it is to be laid in the journal which has to be published in the future in connection with the subject. I do not believe, as I have said, that I should put down by the hon. member just now, as to the kind of question relating to matters of detail which the public Corporation should discuss, the other procedure is taken, but this House can have that information in its forthcoming debate.

MR. R. BUTLER: Does the right hon. gentleman realize that he has said that he is ready to answer questions in debate and have been attacked in Hansard, but that he is not prepared to answer questions now? How does the difference between the two?

MR. STRACHEY: I would follow the hon. member's lead, but I have his speech recorded in the public journals, and I can give the hon. member from it.

MR. BUTLER: Does the gentleman realize that that particular matter raised by Mr. HURD is really a question in substance, which is a problem, and very definitely that these schools should be extended as the work of the Corporation proceeds, and that children would not have to go to other schools, can he tell us whether that policy has been carried out?

MR. STRACHEY: I am happy to say that the educational facilities, provided both by the Government and the Tanganyika Government and the Corporation, are extensive and are being developed.

SIR LEAHY GYLFE: Does not the Minister think that the Colonial Office has some responsibility in the matter, and is it necessary that there should be two authorities responsible for education in the Colonies?

MR. STRACHEY: That is a question in which the Colonial Office is interested, and wishes these responsibilities to be shared as much as practicable by the Tanganyika Government.

Corporation's Powers Should be Circumscribed

MR. DRINGHAM: Would the Minister bear in mind that the fact that, when set up, I given in the winding-up speech at the end of a debate to points raised in it, they are often of a general and perfunctory kind, and necessarily so, whereas the particular replies asked for in these questions would be far more precise? Would he discuss the make inquiries from the Corporation as to whether and otherwise, but in the which he has to make a comparison in his mind?

MR. HURD: On points of order, I am afraid that the hon. member has to have the matter made clear to the Secretary of State for the Colonies. I think it would be most helpful if he could give some clear ruling.

MR. DRINGHAM: I refer to that point of order, I am still awaiting your final ruling, Sir, Speaker, and I am further debate on this matter of questions regarding the Overseas Food Corporation.

MR. SPEAKER: With regard to a further debate, I have no knowledge as to a further ruling. I considered the matter very carefully, and I came to the conclusion that there is nothing further that I can do, because there are no conditions that any member had not been allowed to do that, and that it is all I am prepared to do. So far they have all been allowed. How the hon. member answer questions, is not a matter of the hon. member's concern.

The question put down of the hon. member, which he has transferred to me, I presume transferred by the hon. member to the right department, and it was considered and the hon. member was the Minister of Food, and not the Colonial Office. Such questions are transferred automatically to the right department of the Table, and that has always been the custom.

Organisation
 speaking to the high class of motor transportation in East and West Africa

WE OPEN OUR SECOND YEAR OF OPERATIONS WITH A FLEET OF OVER 20 MODERN CARS AND COACHES

Our services include

Chauffeur-driven cars for touring Central Africa
 14-Passenger Luxury Coach Tours from Nairobi through Kenya and from Kampala to the Belgian Congo, the Mountains of the Moon and the Murchison Falls
 Regular Luxury Coach Services from Nairobi to Nakuru, Arusha, Nyeri and Nanyuki, and from Kampala to Lake Kivu
 Self-Drive Cars in NAIROBI and at our Branches in KAMPALA, MOMBASA and DAR ES SALAAM

Labour Now the Real Empire Party Benevolent Dictatorship Out of Date

THIS is not the Empire was the title of the leading article in last week's issue of *Tribune*, the Socialist weekly journal, whose joint editor is Mr. Michael Foot, Labour M.P. for Doncaster. It urged the need for a consistent plan of Commonwealth development, "knocking us out of the line" of an ideal of 1945, "benign imperialism."

Before the war the Labour Party's interest in the Empire had been concentrated on an attempt upon the eyes of voters of Imperialism, the said party, under a consistent plan of "benign" development, has been evolved. The second world war has changed the whole picture within the Commonwealth, comprising the Colonial Office to New York, which has seen the demands for freedom and independence.

Moreover, the terms of trade since the war have fallen against Britain. Whereas we were once able to watch with complacency the disastrous slump in the prices of wool, cotton and raw materials, to-day we were vitally concerned in the supplies of food and raw materials which the Colonies could produce.

The attitude of the political parties in Britain could not remain unchanged by these momentous events. The past three years have seen the beginnings of many significant changes. Surprisingly few, however, have noted that it is the Labour Party which is becoming the real Empire Party, while the Tories and Liberals, shackled by the ideas of yesterday, they cannot bring themselves to admit that most important in the Colonies was an indication of their new attitude, the distinguished Mrs. Margaret Bowley, *Chairwoman of the Aberdeenshire and District Trades Union of Women*, has commented, "Our efforts are only a makeshift arrangement for the party alone, we are in the Crown Colonies, we should have them as well as the other Colonies." The attitude of the Tories has been still more drastic, "The Empire is a thing of the past, their eyes were blind.

to the changes in the world, and having been blind affected a deference. They had no sense to what they were actually happening to them within the Empire. The facts show an extension of Empire trade far exceeding anything previously achieved. In 1947, exports to the Colonies were already 30% above the 1938 volume, and in the first half of last year they were 80% above the pre-war volume. Under the British Four Year Plan they are scheduled to rise to at least 226% of pre-war by 1953. No doubt it is wise to keep this in mind, but without the planned export drive, whole areas of the Commonwealth would have turned also to other uses.

In a Commonwealth as a whole, 21 per cent of total goods in the first half of 1946 were 24% above the 1938 volume. Total exports of capital goods to the Colonies, on a par with the 1948 figure was 247% of the pre-war volume.

Commenting on the extension of trade, purchase long-term contracts, the writer says: "The Commonwealth and Colonial producers are not bogged down by the ideological prejudices that set in such contracts, the prospect of gaining their own sustenance and of securing themselves against the latter world slump and depression which smashed their economic in the thirties. The primary producer is beginning to emerge from his passive attitude as a great Empire could reverse the process, and a steadily perils."

Commonwealth Conference

THE INTERNATIONAL CONFERENCE ON THE COMMONWEALTH, held at the Colonial Office, has just published for general information, the discussions were devoted almost entirely to purely scientific aspects of the study of the cause of the most urgent problems of health and animal husbandry, including the disease caused by new drugs, including the use of antibiotics, and the use of additional resources in the field. It was an attempt to force the British Government to make a more serious study of the problem in 1950. Whether this will be "convention" in form or in the Belgian Congo has not been decided.

Challenge to the Colonial Office

Welfare Department Again Criticized

FURTHER CRITICISM of the welfare department of the Colonial Office has been made in a letter sent to the Times by the Rev. A. G. Fraser and other signatories. It reads:

"Young Africans are coming in increasing numbers to the Port of London. Proud of their British citizenship, anxious to see the heart of the Commonwealth for which they have been fighting, ready to help to solve our labour shortage, and desiring to earn by evening classes the education for which they crave. Coming from many parts of Africa these pioneers have ambition, energy and skill.

The East End of London is a challenge to the Colonial Office in its attitude towards these young and enthusiastic people. It is the welfare of our African visitors—both as individuals and as a group—that also the policy of the Colonial Office is concerned. It is the duty of the Colonial Office who are to return to their homes in Africa, to help them to set up their own communities. The Colonial Office, however, and heavy responsibilities will be sufficient to be done effectively. The remedy is clear.

Training arrangements inadequate

The Colonial Office welfare department concerning which we can neither understand the conditions that these young Africans arriving at the Port of London intend to spend some time here, nor do they help the men as surmount their difficulties. The present hotels, Colonial houses, hostels, with sleeping accommodations for 10 adults and small state conference rooms could hardly be more inadequate.

A good hostel is needed in East London and it should be run by the white men, who, in experience and skill, far outstrip our staffs. They should give the assurance that in this busy and puzzling world of London there is at all times a safe refuge to which you can trust a friend and a host.

The East End of London is bombed and overcrowded. It may be argued that it would be better if they stayed in Africa and did not come to London. But the white men who come to London are not only the white men, but also the black men, who have seized their opportunity.

To-day the African visitors are met by the most magnificent of a great port; often grudgingly expelled; the bright flame of their hopes turned to dust and ashes. Tomorrow the political propaganda freely poured out on them will be fatal and the men who might have been loyal will be bitter and will be fighting in Africa for the surrender of all that has bind them to the British Commonwealth. There is still time to save the situation. Will the Colonial Office take action here and now?

Contacts With British Home Life

Reference is made in this letter in the same matter for many days in the H. J. Rawlings, of London, who writes:

"Good hosts of extremely important reception and clearing houses, but I suggest that they should be set up for these purposes. What very many young Africans want above everything else is to be admitted to the family life of the British home, where, in their leisure hours, they can have a truly life of the hosts.

From time to time they come from time to time to see a social contact with the academic or research people, but in deep frustration, not having been able to have any contacts with British people in their own homes and barracks, we think we are on day-to-day basis, and how we react in any given situation.

It is a mistake to suppose that all Africans, merely because they are Africans, meet on any other common ground. In fact, they are a very wide variety of cultural backgrounds, and they are all young men of whatever colour. The pressure on the funds of the money to spend, the need to find common ground in politics and religion.

Further views on the subject appeared in a letter later in the month from John M. M. of University College of London.

Mr. S. W. W. Peters was suggested that "children should be placed in families, the families which one would wish to set open their doors to, and of those who do so readily not all by any means are suitable."

"The Colonial Office is aware of the problem. In its hotel in Queen's Gate Gardens, for instance, it holds a trial solution. Its method, the housing of Africans by themselves, is not the best one, the Colonial Office is not at all pleased. The duties of the colleges and universities, which are a part of the life of their students in London, to which a great number of them should be admitted to the future, which is a great advantage to the majority of a solid majority of our own students. Under such conditions the guest-host relationship has to be established, and usually it does. That is the experience of the policy."

NEWS ITEMS IN BRIEF

Sleeping sickness has broken out in the Nyanza Province of Kenya.

A reduction of three cents has fallen in the price of steel has been made in Uganda.

The Legislative Council of Tanganyika will reassemble in Dar es Salaam on March 3.

An appeal to air transport funds in South Africa has been launched in South Africa, headed by the Mayor of Bulwer, Mr. H. S. ...

Miss Lock, Governor, an anti-communist, and a member of the British South African Police, has been appointed Member of the Legislative Council, and Mrs. M. ...

An appeal by women of the Nyanza district in Kenya has been made for one month's imprisonment for a woman married under the Marriage Ordinance, when she was still married according to Native law.

To encourage an appeal on behalf of the St. John's Hospital, Johannesburg, the Northern Rhodesia Government has offered to contribute to the fund for every £1 collected within the territory up to a maximum of £100.

African purchases of European goods in Kenya, indicated by a recent ordinance have not increased consumption in 1949, as was expected. The reason suggested is that the average expenditure was less. Africans obtained what they required on the black market.

Bequests to I.C.S.

Among the bequests of the late Mr. Arthur Edmund Wells, of Bristol, £12,000 each to the Church Missionary Society's general fund and the medical missionary auxiliary, and £300 each to the Society for the Propagation of Christian Knowledge and the Colonial and Continental Church Society.

A small airplane, of 10 seats, which is to be used in the territory of the Northern Rhodesia Government, the Royal Empire Building, will be used to replace the flooring in part of the new building in Northumberland Avenue.

During the war the building was seriously damaged in an air raid, and the roof, which the gift of the Northern Rhodesia Government, was destroyed. The Union-Castle Line states that the ship is to be used on a short notice, within a few days of the passengers prepared to accept an offer of accommodation in the first and cabin classes, and early sailings on the passenger ships. East and South Africa, on seven days, to 48 hours' notice. Prospective passengers must state the exact date of departure, and should not hurry for a berth more than two months in advance. There is a limited amount of accommodation available in the first and cabin classes of the passenger ships leaving the country between now and December.

Problems of Raising Africans' Output S. Rhodesia Labour Board's Report

THE IMMEDIATE GOAL of the Africans is as large a share as they can get, and the Board has had to listen to some wild and extravagant claims put forward without any relation to the value of the work performed and its economic value. This opinion is expressed in the report recently published in Southern Rhodesia by the National Native Labour Board, which has now completed its extensive investigations into the wages and conditions of African labour, and as already announced, has made recommendations which have been gazetted as provisional regulations by the Government.

"We are convinced," says the report, "that Africans are capable of an improved output if they are allowed to make the effort, but the evidence is that the average worker has hitherto shown little inclination to do so. On the other hand, much labour was being used wastefully, many employers had no regard for their employees' welfare, failed to instruct them adequately, and neglected to give proper supervision."

Minimum Humanitarian Standard

Commenting on the new wage recommendations the report continues: "There is a minimum standard in these matters below which, for humanitarian reasons alone, conditions cannot be allowed to deteriorate, and undertakings which cannot maintain this standard must either be subsidized or face the inevitable consequences."

On the question of living costs of Africans, witnesses had claimed that the average present wage would not buy as much as that paid for smaller work in 1929, the submission being made, however, that such loss was common to all wage-earners.

"Whether that be so or not," remarks the report, "Africans living so near the poverty line, as most of them do in urban areas, have necessarily to spend a very high proportion of their cash earnings on necessities, and therefore suffer more than wage earners of higher levels."

Mr. G. C. Turner's Address

(Continued from page 26)

the least of our bearings and charity. All of us wish to go to work in Africa, however technical our job, and all of those among whom and for whom we work, must always be remembering a famous answer to the lawyer's question of long ago: "And who is my neighbour?"

In 1931 an officer of the Sudan Medical Service, who was spending his leave in Uganda, told me over a cup of tea, of a recent adventure. He had come to Malindi in a very old car, which broke down as he drove one day from Kampala to Malindi. He turned it to the side of the road, and as he started working on it he heard someone groan in the very long grass. There he found an elderly African, evidently in the worst need of a doctor's help.

"When one of these mountebanks who were drifting in Paris along the roads from Reims for hundreds of miles away to earn a little money in France. Taken in, he had fallen out of his party and been left behind, perhaps to die."

Since my friends' car was out of action, he could not take this poor man into the hospital at Malindi. So he went into the road, to stop passing cars and ask a lift for the patient.

"The first two cars were driven by Indian traders. He stopped them and asked for help, but for various reasons, natural enough, I care not, they would not give it. The next car was rather better, and it contained Africans, including the owner, one of some standing. When he heard the situation, he stopped the car, and facing the stranger asked: 'What is the matter?'"

"The man, who, I think, had no proof that he had this claim of humanity, he declined to take him."

"Next he pulled up one more, and the driver said the regulations forbade the conveyance of a patient infected with sickness, whereas my friend, by the assumption of some authority, persuaded him to take the patient into the front seat, reserved for first-class passengers, and paid the fare for his journey to the hospital. I never heard the sequel."

The Board considers that an increase in the African's standard of living should—provided his wages are related to his productive capacity—prove a valuable stimulant to industry and trade. The need for incentive is unmistakable, and wage scales providing incremental pay for efficient work are universally recognized stimulants.

If the Africans do not realize that increments depend on equivalent work, it is vitally important to hammer that truth home as soon and as effectively as possible.

Rejecting the claim by some African workers for the establishment of independent tribunals to decide whether an employer is justified in withholding increments, the Board holds that such tribunals would be contrary to the interests of the Africans, and would in any case prove unworkable. To avoid claims for increments which they were not prepared to give, employers could merely discharge the worker.

Married and Unmarried Workers

It would be contrary to the interests of married Natives, the Board finds, to compel employers to pay higher cash wages of total emolument to them than to unmarried Africans, because of the inevitable tendency of employers to prefer the less expensive unmarried worker. For this reason, no distinction has been made between married and unmarried workers. At the same time, some employers regard the work of married Africans whose wives live with them as more stable and satisfactory, and give them additional wages, bonuses and other benefits, and this action is given the Board's warm approval.

On the subject of trade unions, the report observes that some Africans are willing to accept European guidance in this respect, but unwilling to seek the co-operation of some European unions which they contend, might not wholly support the African's Aspirations.

"Africans" have undoubtedly become conscious of some advantages to be gained by collective bargaining, but do not understand the implications and the responsibilities of trade unionism, it adds. "We are therefore of the opinion that guidance will have to be given by the Government by Africans of organizations providing the collective education which commerce and industry, but for the steps that should be taken and the resources adopted, require a far more detailed investigation than the Board in the circumstances of this matter has been able to give."

The recommendation of therefore made that the organization of Native trade unions and associations be referred to a national committee for a full inquiry and report.

Africans' Low Average Output

The Board's assertion that the average production per African labour unit is "deplorably low," is based in part upon statistics indicating that in 1945 the gross value of production per employee in Southern Rhodesia was £3.32, which was rather less than the average for the Union of South Africa (£4.25) and the two countries of the British Empire (£4.25 and £4.46 for New Zealand).

"Shocking enough," adds the report, "was all this, but the African is still a source of labour which has not been induced to progress in a manner which might have been economically desirable for the employment of European labour. At wage rates required for the minimum standard of living demanded by Europeans in the Colony, and in the Southern Rhodesian Native Areas, the African has the means to help his own in a market which demands greater efficiency and output from its workers. Without this help, the Government's attempt to create a greater control over supervision will be counterproductive to the welfare of the individual worker."

Special training courses, selected to train in special types of work with a high degree of competency, and which would come to be regarded as standards of fitness for particular grades of incremental wages in the industries concerned, are mentioned with approval. The Board will, it adds, be possible to establish a system of special training, capable of industrial application, and to form a report of the Development Co-ordinating Commission. The aim of this report is to provide proper equipment and training for the African's output at a high standard of manufacturing excellence, and to ensure that it is not affected by the monotonous nature of the work.

Tractor Trials in Groundnut Scheme Impressive Performance by Shericks

THE CURRENT ISSUE of *Vickers Overseas News* contains a short article on the trials of the first British manufactured Sherick tractors in the first African groundnut area. The experiments took place in the Southern Province at Ndogoya Camp about Mambasa, where the ground consists mainly of red soil which during the dry season is extremely hard.

The tests are all of the hard-wood variety, says the magazine, being the hardest also the most difficult to plough. Of this type of tree there are approximately 150 acres, ranging from one to two feet in diameter, the remainder being small trees and bushes with *acacia* bushes, two sets of lateral roots at depths of approximately 12 inches and 24 inches, and a very deep tap root which extends into the ground vertically. This tree, taken in conjunction with the hard soil, is a very heavy more or less the effect of being set in concrete.

Everyone concerned with these trials was favourably impressed with the machine's performance and reliability and the satisfactory tree detachments which were carried out under difficult ground conditions. The soil was baked so hard that in some cases the tree would turn over rather than move the 1800.

The case with which the vehicles could be handled was demonstrated by a Sherick tractor which was able in three days to clear 100 acres of ground.

Chief Koinage

SIR CHIEF K. KOINAGE, in charge of the Kikuyu tribe who has been a prominent man in the affairs of his people since 1905, has retired. He was awarded the certificate of honour in 1930, the King's Medal for African Chiefs in 1934, the King's Silver Jubilee Medal in 1935, and the Dominion Medal in 1937. Mr. Koinage represents the Africans of Kenya on several occasions and in 1937 gave evidence before the Joint Committee of Parliament on Closer Union.

Groundnuts and Imperial Preference

FOLLOWING A STATEMENT by Mr. Harold Wilson, President of the Board of Trade, that "it would have been easy to have carried out the great groundnut scheme before the war when there were no shortages of labour and materials," Mr. W. A. Wells of the Empire Industries Association has replied, in a letter to the *Financial Times*. Mr. Wilson paraded a characteristic ignorance of Colonial matters. Before the war the problem was not shortage of groundnuts but of markets. It would have been an act of madness to spend millions of dollars in producing more groundnuts when it was difficult to market those that already existed. A very much more practical way of assisting Empire producers was adopted when in 1932 a 10% duty was imposed on imported foreign groundnuts. Imports of Empire groundnuts increased from 1,800 tons in 1932 to 326,000 tons within six years, thus putting £3,685,000 in 1938 alone into the pockets of Empire producers and the virtual loading of British taxpayer a penny.

Beta Port Record

BETA PORT established a new record for cargo handling last year, with 1,386,000 tons of direct imports and exports dealt with over the wharves. The proportion of cargo (1,860,000 tons) increased from 51% in 1947 to 54% last year, and although the total of exports has been exceeded before, the import total 726,000 tons the highest ever achieved. At the head of the list of port commodities is bulk oils, 348,500 tons (128,100 in 1947), followed by cement, 252,000 tons (52,000), iron and industrial materials, 84,500 (58,000), railway rolling stock and materials, 61,400 (35,400), timber, 40,000 (43,000), motor-cars, 36,600 (46,100), packed oils, 30,000 (20,500), wheat, 26,900 (26,900), textiles, 25,000 (30,500), and fertilizers, 11,100 (21,600). The greatest drop is recorded in maize imports, which fell from 64,800 tons in 1947 to 10,500 tons last year. In the export list, copper still holds the lead with 202,000 tons in 1947, closely followed by chrome ore, 200,500 (176,000).

Employed Women and Children

CONDITIONS of employment for women and children in Tanganyika are laid down in an ordinance recently gazetted. The permitted occupations are: brightening monkeys and bushes, planting and harvesting Nanyang beans, herding stock, running messages, spreading dung on outdoor drying lines, sweeping compounds, waste-pest control not involving the use of chemicals, picking coffee, tea and pineapple, light industry work, plucking tea seedlings, suckers and bolting, shading young tree bushes, removing prunings, tapping rubber trees, planting out sugar cane, grading tobacco, tying, hands-on tobacco, basket making, and carrying fruit (other than bananas). Children may not work on roads marked as "no work" more than one consecutive hour or more than 1 1/2 hours out of the day; they may not be employed between the hours of 5 p.m. and 7 p.m. or during any hours when they should be receiving instruction at school.

Kenya Farmers' Association

MR. R. CALVERT-LANK, general manager of the Kenya Farmers' Association, has written a letter to members that the only way to secure business preference he was applied at the destructive criticism levelled at the directors after they had admitted their full share of responsibility for the present position. Constructive measures would be taken during the present year, including the appointment of two business men to the board, an attempt to reduce overheads by £100,000, reasonable profit margins on all goods sold, internal reorganization of inefficient departments, and the establishment of the body which must stand for strength—the largest co-operative organization in the Colony.

Main features of the eastern littoral of early trading ventures in West Africa, the empires of the Gold Coast form a notable feature of the coastline of the Colony. Built by Danes, Portuguese, Dutch and English they served both as trading quarters for their respective trading organisations and as strong points against hostile tribes and jealous commercial rivals. Today many of them are in ruins, while those that have been preserved are mainly in use as Government offices, as in the case of Cape Coast Castle, built by the English in 1662, or as rest houses or prisons.

Although gold, which attracted the early European adventurers, is still an important source of wealth to Ghana, its predominance has been strongly challenged by the growth of the cocoa industry which now provides about half the world's total production. Full and up-to-date information about developments in the Gold Coast covering the cocoa industry and other commercial activities of importance is readily obtainable on request.
