## ABSTRACT

The following report introduces the Kenya Agricultural Documentation Centre (KADOC), situated in the Ministry of Agriculture and Livestock Development Headquarters as pertains to its stand in the ministry, how it serves Kenya as a nation and its role as a link to the rest of the world.

The project attempts to cater for the existing 4000 documents with the aim of solving the immediate information retrieval problem whereas at the same time it gives suggestions for an ideal system.

The report is divided into four sections:-

1. Project definition - the existing KADOC system
2. The existing batch system
3. A step towards the solution
4. Conclusions and recommendations.
