

Dr. P. Mehta returns from clinical attachment in iIndia

Date and time:

Tue, 2015-06-16 12:54

On 15th June 2015, Dr, Nikita Praful Mehta, returned from a three month attachment at MOIT International Hospital, Chennai, India. [MOIT International Hospital](#), described as one of India's best, is a 1000 bed facility offering treatment in over 46 specialties including cardiac surgery.

Cardiac surgery is offered at the MOIT institute of Cardiac Care where routine cardiac surgeries are performed including heart transplants and three organ transplants.

During her time there she was under the supervision of [Dr. Robert Coelho](#), Who is the Director and chief paediatric surgeon.

The objective of the attachment was to give her exposure to paediatric cardiac surgical cases and expand her experience beyond the cases she is likely to be exposed to at the Kenyatta National Hospital.

She managed to see a wide scope of surgeries as shown from her surgical log. She feels she gained a lot from the experience, which was very busy at a six day week.

Department also finds this form of international attachment a useful addition to our teaching delivery
