

NASA LONGONOT TEAMBUILDING

October was the month, mount Longonot was the venue. Theme; fun, challenge and team building.

The day sure lived up to its billing, with 55 students drawn from across the actuarial divide attempting the treacherous terrain of the mountain in the savannah. Some fell by the wayside, some were pushed, heck carried up the trail as the students engaged in a sure test of will and endurance.

The breath at the top was sweet, mission accomplished at roughly 1530 hours. It was a one of a kind induction for the freshmen, as they got a chance to draw parallelisms between conquering academic mountains and actual 2700m ones. To the rest, it was a nice way to unwind, bond and lose that extra weight.

Mt Longonot
