# Objectives

By the end of the session, participants should be able to:

- a) Identify Ms Excel tools used for data analysis
- b) Analyze data using the tools

# Ms Excel for Data Analysis

- Ms Excel provides powerful tools that for data analysis which include:
  - a) Sort:** Help to arrange data in either ascending or descending order. You can sort your data on one column or multiple columns
  - b) Filter:** This is a tool used to display records that meet a certain criteria
  - c) Conditional Formatting:** Conditional formatting enables one to highlight cells with a certain color, depending on the cell's value.

# Ms Excel for Data Analysis

- d) **Charts:** Enables one to present data in graphical form
- e) **Pivot Tables:** A pivot table allows one to extract the significance from a large, detailed data set. It enables one to view data in summarized form which enable one to draws a meaning from the data
- f) **Tables:** Tables allow one to analyze data quickly and easily.

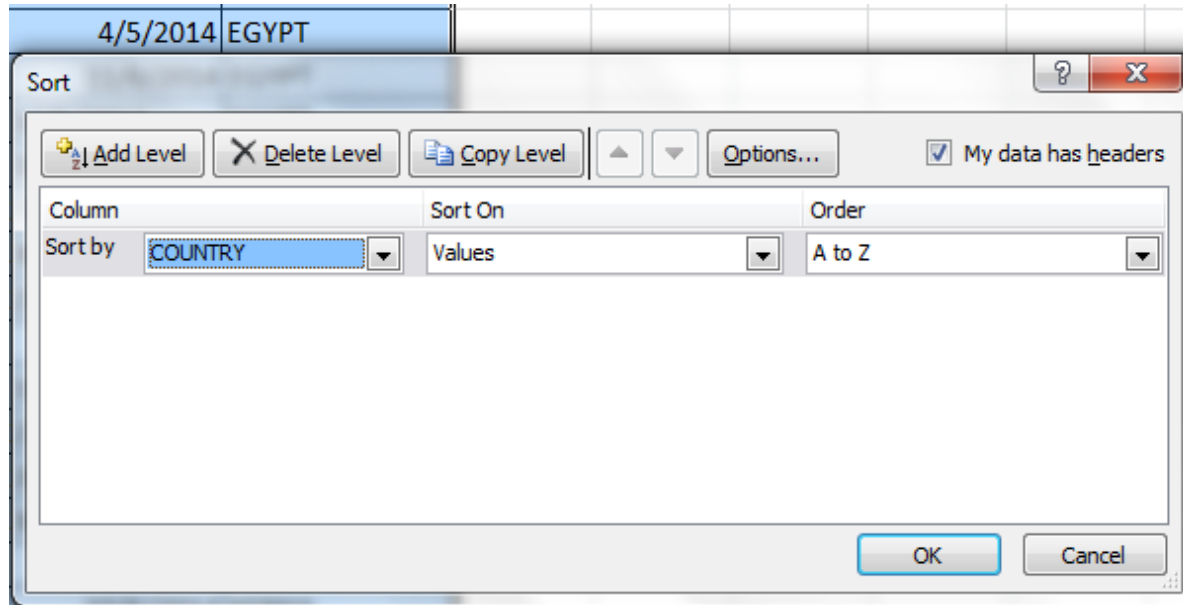

# Ms Excel for Data Analysis

- g) What-If Analysis:** What-If Analysis in allows one to try out different values (scenarios) for formulas and predict the possible outcomes based on different scenarios
- h) Solver:** This tool uses techniques from the operations research to find optimal solutions for all kind of decision problems
- i) Analysis ToolPak:** The Analysis ToolPak is an Excel add-in program that provides data analysis tools for financial, statistical and engineering data analysis.

# Sort

- Steps:
  - i. With an open worksheet, click inside the data that you want to sort
  - ii. Click on data tab
  - iii. Click on sort from the data ribbon
  - iv. The sort dialog box below appear;

- vi. Type scenario name
- vii. Choose the changing cells e.g. Quantity
- viii. Enter new values for the changing cells
- ix. Click ok
- x. Then click show to view the changes in the calculated values

# WHAT-IF ANALYSIS

- Using the Goal Seek
  - i. Select the cell containing the formula that will return the result you're seeking; in this example, cell G5
  - ii. On the Data tab, choose What-If Analysis→Goal Seek in the Data Tools group

**NB: Dialog box below appears;**

# WHAT-IF ANALYSIS

- iii. **Select the To Value text box and enter the goal**
- iv. **Select the By Changing Cell text box and select the cell that you want to change**
- v. **Click OK**
- vi. **If you want to keep the values entered in the worksheet as a result of goal seeking, click OK as in the diagram below;**
