

CEBIB Holds First Years 2015/2016 Induction for Kenyan and International Students

Date and time:

Tue, 09/15/2015 - 14:49

Location / Venue:

CEBIB Training Facility

Dr. Linda M. Murungi, explains to the inductees on the importance of active participation in CEBIB Journal Club & Seminars.

On Tuesday, October 15, 2015, the Centre for Biotechnology and Bioinformatics (CEBIB) inducted all national and international postgraduate students enrolled for the Masters programmes in the Academic Year 2015/2016. The orientation exercise is conducted at the beginning of each academic year to acquaint new students to the Centre programmes, services and also to provide tips on embarking to life in academic and research careers.

This year the new students had the invaluable privilege to learn about the intricate balance of research-based academics and life from a senior student's perspective. The fresh trainees attended sessions that exposed them to the learning resources to empower them in pursuit of knowledge at the Centre. Sessions were also organized for the students to familiarize themselves with the University policies, rules and regulations in the course of their lectures and research at the facility.

Orientation was not only provided to acquaint new international students with CEBIB, but was also tailored to help students become more comfortable with the Nairobi area and the cordial Kenyan culture. The diverse student population, vintage-structures coupled with state-of-the-art resources and the conducive natural ambience of the cool and lush green environment at the College for Biological and Physical Sciences provides a neighborhood unique and conducive for learning at CEBIB. Orientation also presented an opportunity for students to know their way around the campus and the various amenities.
