

## PACN Congress 2015 Kicks off

Date and time:

Tue, 2015-11-17 15:39

***Ramil Burden, the Vice President Africa and Developing countries for GSK delivers a lecture during PACN Congress***

The Pan African Chemistry Network (PACN) congress has officially begun at the College of Biological and Physical Sciences. The congress themed “Healthcare: From Discovery to Delivery” has brought together leading and aspiring chemistry scholars as well as industry players across Africa. In his opening remarks, Prof. Bernard Aduda, the principal college of Biological and Physical Sciences, acknowledged the role played by the Royal Society of Chemistry. The organization has played a major role in recognizing researchers such as Prof. [Wandinga](#) and Prof. Midiwo among others. Their contribution has helped redefine how research in analytical chemistry is important in finding vaccines in healthcare. Ramil Burden, the Vice President Africa and Developing countries for GSK stressed the importance of analytical chemistry in solving healthcare challenges. He started that “No one organization, government and universities can tackle the problems engulfing the world. Thus, collaborations and establishing networks between organizations can help people in rural areas of Kenya and Northern part of Uganda access vaccines”. The ceremony which begun on November 17, 2015 at Millennium Hall 1 will end on November 19, 2015
