2.0 OBJECTIVES - OF THE SITE VISIT

There were two objectives for the site visit:

- .01 To attend and assist in the Kamariny Harambee show - Iten (scheduled for 28 - 30 January 1988) where the A.S.A.L. programme had a stand exhibiting the Appropriate Technology which had been recommended at the research stage of the project.
- .02 To visit at least one school where the implementation of the recommended materials and technologies had begun.

However, only the first objective was realised. The second objective could not be realised due mainly to two reasons, namely:

- (i) Involvement in the Kamariny show became more intensive than had been envisaged. Consequently the A.S.A.L Programme Officials could neither spare a vehicle nor an official to take the project team to the site.
- (ii) The A.S.A.L. programme co-ordinator, Elgeyo - Marakwet District, Mr. Bos informed us that the work on site was not very advanced to allow us a comprehensive view of how the implementation process is progressing. He informed us that site work had just started at two primary schools; where only the production process of the components had started. The construction process had not yet taken off so he felt that it would be better for us to visit the sites at a latter date, say in March or April this year when construction work would have begun.

Therefore this short report is only concerned with the Kamariny Harambee show.
