July 17<sup>th</sup>

Sir,

Herewith I have the honour to inform you that I have placed a list of the details which I consider necessary for sinking shallow shafts before the Crown agents, have seen Messrs C. S. S. The manufacturers and returned the Permission list to the Crown agents.

1. For the proper working of this outfit, I would suggest a foreman ~~is~~ accustomed to sinking shafts under similar conditions. I understand that a man may be obtained from the Indian, an arrangement which I think would be ~~very~~ satisfactory.

About the labourers would be required, if possible the change of a Headman who has had some experience in the Department of Public Works and is capable of taking charge of the work for a few hours.

3. If possible, I would strongly advise the use of a Scotch cart for transporting this material, as beach transport necessitates cutting up manila and wire rope into lengths and splicing on the site. If beach transport be the only available means about 150 men will be required. The labourers wanted for the work of sinking can, of course, be drawn from these.

4. I would request permission to obtain a small thermometer (13/6), a rain-gauge (5/6) and a pan for measuring evaporation. With these some useful data would be obtained.

I have the honour to be,

Sir,  
Your obedient servant,  
John Parkinson

Under Secretary of State  
for the Colonies  
Colonial Office
