No. 17185 / B.

SUBJECT

C0533/411

Native Lands Trust Ordinance.

Demarcation of Boundaries of Native Reserves.

Previous  
File "A".

16010/30. (N.Z.T.)

15560/29. (Annex  
of Native  
Reserves)

Subsequent

File "C".

18061/2/32.

Govt's Rep. biome Conf 89 17 March  
fix their schedule by Surveyor General showing exact  
position in regard to boundaries of Native Reserves  
as at 31<sup>st</sup> December 1930. Submit comments on the  
demarcations and enclose map showing progress  
made.

The survey work accomplished  
on the boundaries of the  
Native Reserves for one Qr.  
ended 31<sup>st</sup> Dec 1931 represents  
18 miles or 32% less than  
that done for the preceding  
Qr. This is primarily due  
to the need for financial  
economy & also in some  
measure to sickness of one  
of the surveyors. It is not  
considered that more than  
50 miles of demarcation per  
Qr. can be accomplished  
until economic conditions  
improve. The balance of  
work to be done amounts  
(Q - 14.60 miles so at the  
rate of 300 miles p.a. it  
will take a further 7 years  
? Ask us to interest & comment  
on full answers on which  
matter has been treated. Express  
hope that notwithstanding  
financial disability every  
possible effort will be

made to speed up this  
important work.

~~copy~~  
27-5-31

This despatch gives an admirably clear explanation of the position. From the information given it appears that 300 miles of boundary, not yet done, must be regarded as important, in addition to 320 miles in the Coast Province; at the rate of 50 miles a quarter the important work should be completed by the end of 1932.

The recent long despatch about native ~~land~~ rights to and needs for land outside the reserves may, however, make it a waste of money to demarcate some of the boundaries since the despatch suggested enquiry as to the desirability of adding to certain of the reserves.

Perhaps the Secretary of State might reply as in draft herewith, for conson.

G. Euston  
30.5.31

I think we must be content with this in present circumstances - we shall be able to make progress as we are to continue to take surveys & maps. I have selected various bits & pieces which are <sup>desirable</sup> & necessary to fit in with the law - perhaps not this & that for the time being might be omitted.

Very sincerely J.W. Allen 1/6/31

I agree with you, & I  
would too much be sorry for the  
languishing of our work, and could  
be more inclined to delay.

SOL OFFICE

1st October, 1951.

Dear Sir Cecil,

No 7.  
In continuation of my letter of August 26th 1951, on the subject of planting sisal to mark native reserve boundaries, replies have now come in from Provincial Commissioners, from which it seems that trees are generally believed to be more suitable for the purpose than sisal, though the latter has in one instance at any rate proved to be satisfactory. One objection to sisal is that young plants from the original plant spread outwards and in course of time as this process goes on, the boundary is no longer accurately marked: another is that sisal harbours couch grass and a sisal hedge does form an almost impenetrable barrier.

But your point in regard to the disappearance of cut-lines will be met whether it be by means of planting trees or sisal.

Yours sincerely,

*M. A. G.*

SIR W.C. BOTTOMLEY, K.C.M.G., C.B., O.B.E.

Dear Sir Cecil,

No. H

Your private letter to Mr. Moore of the 14th July in which you suggested the planting of sisal to mark native reserve boundary lines was passed to me when he went on leave.

I asked Wade to circularize Provincial Commissioners inviting their views on the practicability and cost of this course, and I attach a copy of a Circular he has issued. I will write you again when the matter has proceeded further.

Yours sincerely,

H. G. Martin

BOUNDARIES OF NATIVE RESERVES - DEMARCTION.

It has been suggested that it might be possible to prevent the disappearance of surveyed boundaries of Native Reserves by planting sisal along the lines - at least along some parts of them.

2. I believe that this suggestion has been discussed on sundry occasions but I do not know that anything has been done about it.

3. I shall be grateful for your views.

O.O.I.

My Lord,

I have the honour to refer to Your

No 38 o. 13510/37  
Lordship's despatch No. 34 of the 11th January, 1930,  
on the subject of the demarcation of the boundaries  
of the Native Reserves in paragraph 2. of which Your  
Lordship requested that progress reports should be  
forwarded at six monthly intervals.

No 1  
2. In my despatch No. 59. of the 17th March,  
I reported that by the 31st December, 1930, the  
demarcation of 1, 510 miles of Native Reserve  
boundaries had been completed. By the 30th June  
this year an additional 105 miles had been demarcated,  
making the total 1, 615 miles.

3. This rate of progress is in close agreement  
with the estimate given in paragraph 9. of my  
despatch referred to above. It might have been  
greater had not one of the surveyors contracted a  
severe attack of malaria, but such incidents must

be .....

THE RIGHT HONOURABLE LORD PASSFIELD, P.C.,  
SECRETARY OF STATE FOR THE COLONIES,  
DOWNING STREET,

LONDON. S. W. I.

be allowed for and I do not consider it safe to estimate for more rapid progress.

4. The 103 miles referred to in paragraph 3, are comprised as follows :-

<u>PROVINCE.</u>	<u>NATIVE RESERVE.</u>	<u>MILEAGE.</u>
Nyanza.	Central Kavirondo	2.
"	Lumbwa	15.
Nzoia.	Nandi	15.
"	Marakwet	20.
"	Elgeyo	7.
Masai.	Masai	6.
"	Masai-Buret Sotik	5.
Ukamba.	Kikumbuliu	29.
Coast.	Dabida	8.
		103.

DRAFT.

H. H. M. MOORE, ESQ., C.M.G.

It occurred to me in reading  
the report of the Survey and Registra-

tion Department that it might be  
possible to prevent the loss of the  
surveyed boundaries of native reserves  
by ~~describing~~ <sup>planting</sup> sisal plants along the  
lines. You see I had seen the ~~described~~ <sup>desolation</sup>  
trees at Wasene and also a quite  
~~neglected~~ <sup>uncultivated</sup> lion hedge at Kilima Kiu  
and it seemed to me that sisal was  
probably the most stubborn thing one  
could find and that even if only a  
proportion of it grew, it would provide  
a recognisable boundary for a great  
many years.

I do not think that I should  
have dared to have mentioned my idea  
to you, but at the opening meeting

*Confidential*  
of the Survey Party I ran into Mr.  
~~Robert~~,  
Bellenden of the Survey Party, and

he thought that the notion was not  
absurd.

There should be an innumerable  
quantity of young plants available,

and I should think that when the line is  
being made or cleared the extra work

of putting them in the ground would be  
very small. At all events, it might

be worth while if there was a chance  
that it would do away with the

necessity of recutting the lines at  
frequent intervals.

*9/12/1941*  
(Signed) W. O. BOTTOMLEY,

15  
3

Extract from Survey and Registration Department  
Annual Report 1930.

2. DEMARCATION OF NATIVE RESERVE BOUNDARIES.

During the year 145.6 miles were demarcated at an average rate of 8.7 miles per surveyor per month and an average cost of £hs. 164/20 per mile. The total mileage was low owing to heavy weather conditions at the beginning of the year and to urgent demands on a depleted staff for surveys in other directions.

Though the demarcation of native reserve boundaries has only been in progress about three years, reports are already being received that some of the lines have been lost owing to the growth of jungle, silting up of trenches and destruction of wooden posts. Unless an annual clearance of the line is made, the money expended on demarcation will be to a large wasted.

Confidential

Gov. Byrne

17/6/31

May, 1931.

15-9 June

Sir,

I have the honour to ack. the receipt of your conf. despatch No. 39 of the 17th March, in which you reported the progress made in the demarcation of the boundaries of the Native Reserves up to <sup>the</sup> 31st December, last.   
desire  
2. I should like in the first place to thank you for the admirably clear statement of the position given in your despatch and its enclosures.  
3. I note from para. 9 of your despatch that you do not anticipate that it will be possible owing to the financial situation to continue the demarcation at a greater rate than 50 miles each quarter. I gather from the information given in your despatch that the demarcation of between 350 and 400 miles, not including the 328 miles in

in the Coast Province, is regarded  
as of special importance, and I trust  
that every effort will be made to  
complete this important work by the  
end of 1932.

4. You will no doubt bear in  
mind, however, the possibility of some  
amendment of the boundaries being  
eventually decided upon as the result  
of enquiries suggested in my Confidential  
despatch of the 1st May, 19<sup>th</sup> April

I am, &c

(Signed) PASSFIELD.

*17th March, 1931.*

RECEIVED  
13 APR 1931  
COL OFFICE

My Lord,

I have the honour to refer to Your Lordship's despatch No. 34 of the 11th January 1930, on the subject of the demarcation of the boundaries of the Native Reserves, in paragraph 2 of which Your Lordship requested that progress reports should be forwarded at six monthly intervals, and to Your Lordship's despatch No. 824 of the 22nd October 1930, in which Your Lordship expressed the hope that the future rate of progress would more closely approximate to that achieved during the period 31st December 1928 to the 30th September 1929.

2. I enclose for Your Lordship's information a Schedule supplied by the Surveyor General showing the exact position in regard to the boundaries of all Native Reserves as on the 31st December last.

3. In order to place Your Lordship in full possession of all the material facts which will lead to a just appreciation of the reasons for which in any particular case, there remains undemarcated any part of a Native Reserve boundary I propose to deal seriatim with the Reserves in the order in which they appear ...

THE RIGHT HONOURABLE  
LORD PASSFIELD, P. C.,  
SECRETARY OF STATE FOR THE COLONIES,  
DOWNING STREET,  
LONDON, S. W. 1.

- 2 -

appear on the Surveyor General's Schedule, under the four separate heads of Administration, Forest Department, Survey Department and Tanganyika Territory Boundary.

4. As Your Lordship is aware from paragraph 3 of Sir Jacob Barth's despatch No. 105 of the 16th February 1929, Administrative Officers have performed the work of demarcating Native Reserve boundaries, where such demarcation could be done without the necessity of recourse to expert knowledge.

5. ADMINISTRATION.

Nyanza Province. The work has been completed and nothing remains to be done.

Homa Province.

Marakwet Native Reserve. Balance 51 miles. 44 miles of this balance is an arbitrary straight line dividing the Marakwet Reserve from the West Suk Reserve. The limits of the grazing areas of the respective tribes have not been found easy to determine, and though the arbitrary straight line has been adopted for purposes of temporary convenience, it is unlikely that it will be retained as the permanent boundary and demarcation, therefore, awaits the final decision as to such adjustments as may be necessary in the legitimate interests of the tribes concerned. The remaining 7 miles are also an arbitrary straight line which is the common boundary between the Marakwet and the Elgeyo Reserves.

Elgeyo Native Reserve. Balance 7 miles.

This is the common boundary referred to above.

Neither of the undemarcated parts affect the boundaries of the Suk, Kamasia, Marakwet, Elgeyo and Njemps Native Reserves which are gazetted as one

Fort Hall Native Reserve. Work completed.

Nyeri Native Reserve. Balance 2 miles.

This balance of 2 miles represents a gap between the sources of two rivers which were chosen as the South Eastern boundary of the South Nyeri Native Reserve. It has, however, been agreed that this Native Reserve shall be extended to the junction of the Tana and the Thiba Rivers so that the previous boundary is now obsolete and there is no object in demarcating these 2 miles. In this connection I would refer to Your Lordship's Confidential despatch of the 11th September, 1929.

Embu Native Reserve. Balance 1 mile.

The boundary here is a line well known to the native inhabitants, dividing the Meru and Embu Native Reserves. For most of the mile it follows a deep gully and its demarcation is of little importance.

Meru Native Reserve. Work completed.

Ukambani Province.

Machakos Native Reserve. Nil.

Kikumbuliu Native Reserve. Nil.

Kitui Native Reserve. Balance 15 miles. This balance of 15 miles is in two sections. 13 miles of it follow a clearly defined road which is the Southern boundary of the area of unalienated land known as the Yatta Plateau, and the remaining 5 miles also follow a well defined track on the western boundary of this same area of unalienated land. Although technically, this boundary has not been demarcated it is very obvious and well known and its demarcation is not a matter of immediate importance. It will, however, receive attention when an opportunity arises.

Iveta, Dabida and Sosella Reserves. Nil.

Coast Province.

North Nyika, South Nyika and Digo Native Reserves. Nil.

- 5 -

Pokomo Native Reserve. Balance 65 miles.

The Pokomo Native Reserves comprise 10 areas which have been reserved along the banks of the Tana River for the use of the riparian population. They do not march with any alienated land or the tribal lands of any native peoples. They are bounded by land which is almost entirely unoccupied and is, to a very great extent, waterless desert. The survey and demarcation of these Reserves would be very costly and in present circumstances at any rate, would serve no useful purpose. I do not propose to issue instructions for the demarcation of these areas unless such a step is rendered advisable whether by the grant of unalienated land in the neighbourhood to concessionaires or by other circumstances at present unforeseen.

6. FOREST DEPARTMENT.

Your Lordship will observe that a total of 7 miles is the extent of the work of demarcation which still remains to be done by the Forest Department. Of these 7 miles, 3 miles are on the West of a piece of forest running into the Kadong Valley in the South West corner of Kyambu District. The Conservator of Forests informs me that to the best of his belief this boundary was demarcated in the past and that he will take steps in the near future to have the boundary trench reopened.

The remaining 4 miles is a long straight line in South Digo running through thick bush and rough country and is such as to render necessary the assistance of a qualified surveyor. This line will be demarcated when a suitable opportunity occurs.

7. SURVEY DEPARTMENT.

Nyanza Province.

North Kavirende Native Reserve.

Balance ...

21

The same remarks apply as to the Lambwe Native Reserve. The work is important and will be done as soon as possible. A surveyor was recently engaged on demarcation in this area but fell sick and the work had to be temporarily abandoned.

Marekut and Elgeyo Native Reserves. Balances 23 and 7 miles respectively. Two surveyors are at present engaged on work in this area. A question as to whether certain surveyed farms should or should not be added to the Native Reserves is still under consideration. The surveyors are working on that part of the boundary which is not in question.

#### Turkana Province.

West Suk Native Reserve. Work completed.

#### Rift Valley Province.

East Suk Native Reserve. B.I.L.

Keniasia Native Reserve. Balance 2 miles.

This distance of 2 miles is a farm boundary. The work is now being done.

Masai Reserve. Balance 337 miles. This balance of 337 miles represents sundry parts of the long Northern boundary of the Masai Reserve. As Your Lordship will observe a very considerable part of this boundary, viz. 166 miles, has already been done and work is proceeding on the remainder as circumstances permit.

Its importance is fully recognised. Part of the undemarcated boundary, namely that part which is the boundary of the Railway Mile Zone and of a triangular area known as the Ghayulu Triangle to the South East of Sultan Hamud Railway Station, is still under discussion and its immediate demarcation would therefore be inadvisable. In this connection I would refer Your Lordship to my despatch No. 43 of the 17th January, 1931.

At another part of this Northern boundary

276

- 8 -

of the Massai Reserve a project, which is favoured by the Massai concerned, is under consideration which, if approved, will result in an adjustment by which the Massai will surrender an area which is now under forest and acquire in exchange, grazing land which they greatly desire. It is advisable, therefore, that demarcation in this area should also await developments.

Kikuyu Province.

Kyambu Native Reserve. Balance 4 miles. The exact line which the boundary should follow here is at present under discussion. The work will be done as soon as a decision is reached.

Fort Hall Native Reserve. Balance 1 mile. This has been done since the printing of the Schedule.

Eyeri Native Reserve. Work completed.

Ihnu Native Reserve. Nil.

Meru Native Reserve. Work completed.

Ukamba Province.

Machakos Native Reserve. Balance 4 miles. This undemarcated line is the boundary of a farm in the South East corner of the Reserve. The work will be done in the near future.

Kikumbuliu Native Reserve. Balance 95 miles. The demarcation of the two Northern Kikumbuliu Reserves has been completed. The 95 miles that remain to be demarcated is the boundary of the Southern Reserve. This consists of 59 miles common to Crown Land and 36 miles common to the Massai Reserve. The demarcation of the boundary common to the Massai Reserve is of no immediate urgency and will be done as opportunity occurs. The boundary common to Crown Land is important and will be demarcated as soon as possible.

Taveta Native Reserve. Balance 48 miles. This also will be done as soon as possible, especially where the boundary is common to alienated land.

- 9 -

land, approximately 18 miles.

Debida Native Reserve. Balance 40 miles.  
The undemarcated boundary is that to the North of the Reserve. Its demarcation is not of any pressing importance as it marches with unalienated land, but it will be done when a suitable opportunity occurs.

Sagalla Native Reserve. Work completed.

Coast Province.

North and South Nyika and Digo Native Reserves.  
Balances respectively, 100, 125 and 100 miles. The major portion of these Reserve boundaries is common to the boundaries of a large mass of small coastal holdings which were actually surveyed some few years ago, but owing to lack of interest or care on the part of the plot holders, the boundaries have become overgrown and in many cases the beacons have been lost or destroyed. The boundaries therefore will have to be re-surveyed but on account of the intricate nature of the work it is being held over until a special staff of surveyors is available. The importance of demarcating these boundaries is fully recognised and it will be done as soon as circumstances permit.

328  
A

8. TANGANYIKA TERRITORY BOUNDARY.

This boundary is already demarcated along its whole course by the intervisible beacons which were erected by the Anglo-German Commission but as the beacons are generally several miles apart it is considered necessary to place further intermediate beacons along the line as a convenience to the natives of both sides. The existing boundary, however, is not in doubt and there is, therefore, no urgency for this further demarcation.

This ...

This common boundary is for the most part an arbitrary straight line. Where it bounds the South Kavirondo District of Kenya to an extent of 50 miles it divides tribes, clans and families. It is not proposed to spend money on further demarcation of this part of the boundary until the question has been further discussed with the Government of Tanganyika which is alive to the administrative difficulties involved.

Of the 223 miles of the line where it bounds the Masai Reserve, 155 miles have been recently demarcated with intermediate beacons, the cost of this work being borne equally between the Tanganyika and Kenya Governments. There remains a balance of 72 miles towards the Western end. No immediate necessity has been shown for intermediate beacons along this portion, and it is not proposed further to demarcate this balance of 72 miles unless some necessity for such a course arises.

One mile of this boundary shown as undemarcated in the Tarata District is at the foot of Mount Kilimanjaro and is of no particular importance.

The 10 miles of the boundary shown as undemarcated in the South Nyika Native Reserve is of no immediate importance as it runs through desert country which contains no population in the immediate vicinity.

9. It is regretted further that the hope expressed in Your Lordship's despatch No. 824 of the 22nd October, 1930, that future returns would show the rate of progress more clearly approximating to that achieved during the 9 months from 31st December, 1928, to the 30th September, 1929, has not been possible of fulfilment. The actual mileage demarcated during the quarter ending the 30th September 1930 was 56, and that during

the quarter ending 31st December 1930, was 18 miles, that is to say a total of 74 miles for the six months. This is admittedly disappointing but it is partly accounted for by the fact that one surveyor contracted malaria while demarcating the Nandi Reserve boundary near Muhoroni and was eventually transferred from the district on medical orders. The principal cause however is the fact that, owing to the financial situation, vacancies which have occurred in the field staff have not been filled and only two surveyors are now available. Moreover the money available for transport and travelling has been reduced very drastically and until these disabilities are overcome it will not be possible to maintain more than an average of approximately 50 miles a quarter and this will depend on the health of the surveyors as well as fair weather conditions.

10. No account has been taken in the Surveyor General's schedule of the Northern boundary of the Meru Reserve, the Eastern boundary of the Kitui Reserve and the Southern and South Eastern boundaries of the Machakos Reserve and the Western boundaries of the Nyika Reserves, the reason for this being that these boundaries are arbitrary straight lines running through unpopulated desert country. The demarcation of such boundaries would at present serve no useful purpose and certainly would not justify the expense of the work.

11. I enclose in triplicate a key map of the Colony showing diagrammatically boundaries coloured.

red ...

red which have been demarcated and those in yellow which remain to be done.

I have the honour to be,

My Lord,

Your Lordship's most obedient,  
humble servant,

*H. W. B. M. S.*

GOVERNOR'S DEPUTY.

DEMARCATION OF NATIVE RESERVE BOUNDARIES. PROGRESS REPORT TO DEC. 31<sup>ST</sup> 1930
