Nakuru - Kasarani Station

know how funds will be provided, but it would appear that cost of survey will be defrayed from same source as cost of construction, i.e. from annual exchequer. Therefore for the present do not propose to suggest any reallocation to provide for £2000.

Sir J. Anderson

I attach copy of Sir G. Fiddes' letter to Sir H. Belfield of April 8th.

It will be clear to Sir H. Belfield when he gets the letter that the line will be built on terms of "bonuses & tender," so that it is not very material whether the cost of survey is refunded for the capital money when (or if) raised, or borne by the Protectorate itself.

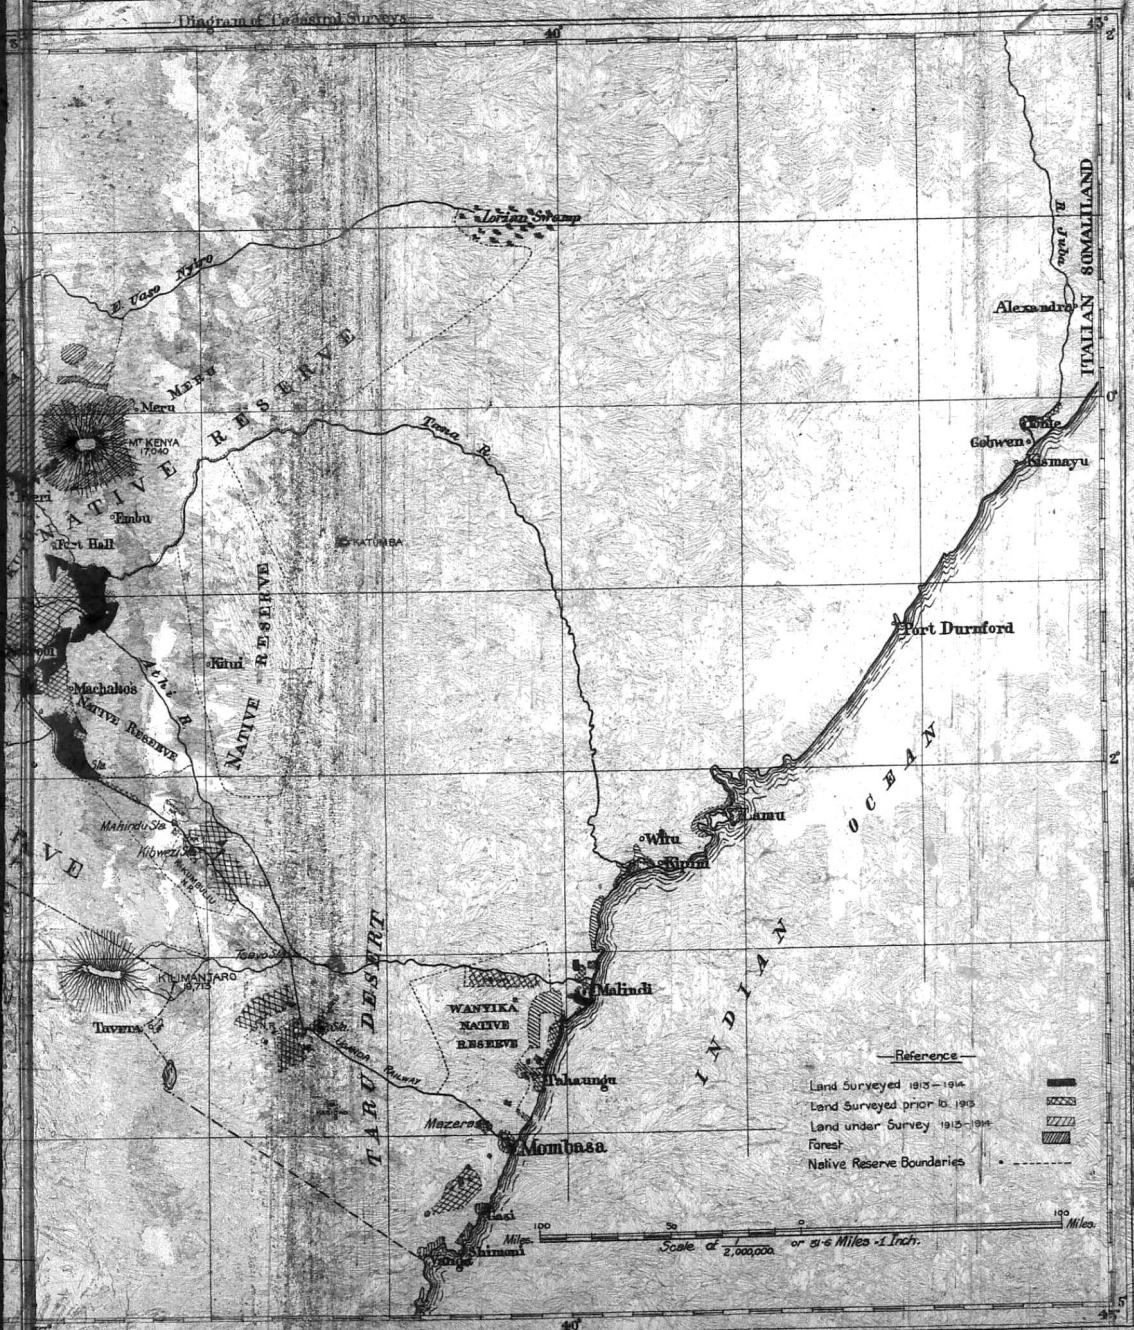

This would not be a good reason for allowing the Prot. to bear the cost of survey out of balances if we were clearer as to the general financial position of the Protectorate. But the original estimates appropriated every penny of the anticipated revenue and

15

The compilation of this series of farm sheets is of first importance. It will form an excellent framework for the rapid production of maps to a reduced and more serviceable scale. Moreover, the Meridional District System and Card Index Scheme are based on these sheets.

(i). A time and labour saving device which has been adopted with success is that of utilizing extracts from lithographs, specially prepared on parchment paper, of general allotments, as-deed and license plans and township deed plans.

This device has served to alleviate somewhat the sudden strain engendered by the periodical demand for large numbers of license and auction plans, due to the present system of sale of farms by auction.

(e). One draughtsman is in charge of the set record book, which contains from 1910-1911 valuable survey records. A card index system has been carefully worked out in detail; this will be in charge of the Records clerk allowed in Estimates 1914-15, and when he is obtained, the draughtsman will be set free to perform his proper duties.

(f). Throughout the year one draughtsman has been engaged on the drawing up of site and general plans in connection with the Coast Cities.

Combahee Township and miscellaneous coastal work has kept another draughtsman fully employed.

(g). The staff of the drawing office has been fully occupied throughout the year in the preparation of auction, land and license plans and cadastral sheets and the preparation of general plans has in consequence been retarded.

(h). The work of preparing the new 15 minute 1/63,500 Cadastral Sheets has been progressing slowly. This series will form a complete record of all survey data. 106 sheets have been plotted in skeleton during the last two years. This leaves a further 20 sheets to be dealt with, when the whole of the settled district will be covered.

during the year licensed surveyors have increased their practices very largely and are now employing many more assistants; so that their output is becoming out-of-all-proportion to their actual numbers. Further, surveys of private subdivisions have to be checked for registration purposes. In consequence work of the computing staff has fallen into arrears; actually during the year 2000 returns have been received for checking and only 1500 checked.

In order to relieve this condition it was found necessary at the end of the year to transfer two surveyors from the field to the computing office temporarily.

III. Drawing Office.

(a). During the year many changes have taken place in the personnel of the Drawing Office, but the vacancies caused by resignations and transfers were promptly filled.

(b). The establishment of draftsmen and tracers has not been changed.

(c). The output of plans, as shown in table X exceeds that of any previous year.

(d). The duties of the draughtsman in charge of the public map office do not allow him to assist in general drawing work. Besides attending to the preparation of maps required by surveyors he also prepares the departmental survey returns.

(e).

(n). Field inspections of a proportion of the work systematically chosen combined with the present rigorous office checks ensure that nothing but reliable work is passed. These field inspections by senior surveyors have been more extensive this year than previously; but the proportion of work checked is still too small.

10. Computing Branch.

(a). The staff for the year has consisted of a chief computer and 6 computers, being three more than last year. Two of these were transferred from the drawing offices; but owing to strain of draughtsmen's work the transfers could not be effected at once. The working capacity of the computing office for the year has in consequence been equal to 8 men instead of 7.

(c). An average of 3 plans out of every 5 have to be returned to surveyors for correction. In some cases work has had to be returned, which was unsystematic and not in accordance with the official methods in vogue.

On the whole however it is satisfactory to note that the general work submitted has shown great improvement during the year.

(d). In order to enable the field work and office checking to proceed pari passu, it is necessary to maintain a proportion of 1 computer to 2 surveyors.

Eburu allotment, Kiu farms, Kibigori - Munoroni
block, Kaimosi Caffia lands, Muthi Dairy
farms, completion of Trans. Nzoia and basin 210
allotments, resurveys in Kikuyu, Eldoret and
Kinangop Districts, Mafindi Coast surveys and
Mombasa Island surveys.

The surveys of the Lake Kipia and North
Kenya allotments are also in hand; these last two
allotments alone will amount to some 370 farms.

(e). The coast lands surveys are making
steady progress. On Mombasa Island all the
shambas have been demarcated and are being
finally surveyed, and the work is now being
carried into the native town.

The Milindi surveys have continued
without interruption. Survey of Mazrui Reserves
has been completed; very heavy bush cutting has
been the main feature of this work.

Demarcation has been started on the
Tana River near Kipini and on the Coast belt
south of Mombasa. A demarcator has been estab-
lished in the Arbitration Boards in each of these
areas.

(f). The standard of work has been well
maintained and is satisfactory.

way the Government surveyors are enabled to devote their attentions to the urgent non-remunerative work, especially townships and road surveys.

(d). It has been necessary lately to subdivide a few of the farms which were surveyed before the main trigonometrical control was established. The survey of these subdivisions has brought to light the fact that no reliability can be placed on surveys executed independently of the main control and before the present system of field and office check was instituted. It is now certain that it will be necessary to resurvey a great number of farms in the Kikuyu and Limuru Districts. This work is now in hand. It is of a non-remunerative character and can only be done by Government surveyors. Further since the subdivisions of these farms are increasing in number and urgency, the staff of Government surveyors is experiencing difficulty in keeping pace with the demand.

(e). Cadastral Surveys during the year have been scattered over the whole Protectorate; the large blocks surveyed have been Ithanga and Sapuk allotments, Luhanya farms, Nyari extensions

• Surveyors.

The arrears on 1st April 1915 were 1,750,008 acres. These arrears were reduced in October to 982,610. In November instructions were received for the survey of farms on Laikipia and North Kenya. This increased the arrears to 2,350,446 acres. At the close of the year the arrears had been reduced to 4,466,470 acres.

From this it will be seen that the Survey Staff are capable of dealing with the normal amount of new work ordered and are able to overtake arrears slowly. It is not expected that other large areas will be opened for settlement in the future as most of the land available for white occupation is now being dealt with. Under these conditions it will take the survey staff some years to reduce the arrears again to manageable proportions.

(b). The development of the country (during the year) has increased the demand for township and subdivisional surveys; a great deal of the Surveyor's time is being taken up with this work which is slow and laborious.

(c). The actual number of farms surveyed which have not yet been taken up amounted on 1st March 1914 to 505; thus satisfying the demand for some considerable time. Licensed Surveyors have been extensively employed to survey large blocks of farms; and in this

9. Surveyors.

(a). The arrears on 1st April 1913 was 1,790,608 acres. These arrears were reduced in October to 982,610. In November instructions were received for the survey of farms on Laikipia and North Kenya. This increased the arrears to 2,590,448 acres. At the close of the year the arrears had been reduced to 1,456,470 acres.

From this it will be seen that the Survey Staff are capable of dealing with the normal amount of new work ordered and are able to overtake arrears slowly. It is not expected that other large areas will be opened for settlement in the future as most of the land available for white occupation is now being dealt with. Under these conditions it will take the survey staff some years to reduce the arrears again to manageable proportions.

(b). The development of the country during the year has increased the demand for township and subdivisional surveys; a great deal of the Surveyor's time is being taken up with this work which is slow and laborious.

(c). The actual number of farms surveyed which have not yet been taken up amounted on 31st March 1914 to 900; thus satisfying the demand for some considerable time. Licensed Surveyors have been extensively employed to survey large blocks of farms; and in this

way

The slight rise is accounted for by the fact that a more extensive and rigorous field check is being insisted on. This field inspection combined with the computing office check now prevents the possibility of any doubtful work being passed.

7. The survey accommodation has proved totally inadequate for the increased staff. Several temporary grass huts have been erected to accommodate the overflow, and at times surveyors, computers and draughtsmen have been obliged to work in tents. The additional accommodation provided for in the estimates 1914-15 is being anxiously awaited; and, it is hoped, will relieve the congestion temporarily. But the computing and drawing staff cannot carry on their work to the best advantage until provided with suitable offices.

8. Clerical Staff. The duties of the clerical staff have been badly distributed; and this has resulted in delays with correspondence, errors in accounts and inefficient storekeeping.

The staff should be sufficient to perform the work required of it. It is hoped be a re-arrangement of duties to obviate these mistakes in future.

9. Surveyors.

Mr. Morris Draughtman invalided home.

Mohamed bin Idriss Surveyor discharged.

Badal Singh Imdum Surveyor resigned.

Mohamed Abbas Tracer resigned.

At the end of the year the cadastral staff was up to strength with exception of Assistant Junior Staff Surveyors. Certain time was necessarily lost in effecting the above mentioned changes.

3. The health of the staff has on the whole been good; though as usual the surveyors while employed on the coast have suffered from a good deal of fever.

4. Seven qualified surveyors have taken out licenses during the year to survey in East Africa.

5. There has been an excess on the cadastral vote of £766. This over expenditure is principally on the Local Transport and Labour vote. A great deal of travelling to execute isolated surveys had to be done. This proved costly but was unavoidable. It was also found necessary to employ an increased number of labourers on bush cutting for coast surveys.

6. The cost per acre of cadastral surveys is 6.06 pence as compared with 4.51 pence last year and 5.96 the year before.

CADASTRAL BRANCH

The output of cadastral surveys has exceeded that of any previous year. Licensed Surveyors have been employed to a great extent on the survey of large blocks of land for alienation.

The following promotions have taken place:-

M.P. C.O. Gilbert to District Surveyor
 Messrs A.W. Fraser, F.S. O'Malley and
 E.K. Boileau to Senior Staff Surveyors.
 Messrs S.H. Ramsey and C.E. Taylor to
 Junior Staff Surveyors.

The following appointments have been made:-

Mr. H.W. Neilson Junior Staff Surveyor

Messrs A.J. Hayes } Assistant Junior
 and P. Allocus } Staff Surveyors

Messrs F.J. Posden, T.R.L. Master and
 L.C. Wright computers.

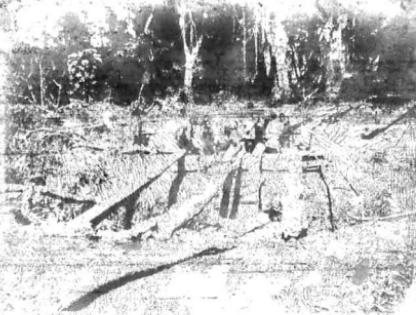

Messrs A.G. Stevens, C.V. Hall, H.V. Thackstone
 and R.C. Walsh draughtsmen.

Kabir Shah and Mahomed Bin Indian Surveyors
 Ami Chand Tracer.

The following have left the department:-

Mr. A.T. Anderson Junior Staff Surveyor
 RESIGNED.

Mr. F.J. Dent Assistant Junior Staff Surveyor
 transferred to Administration.

Bridge Building - Laikipia

Cutting Link, Sonchi, Uasin Gishu

c. Drawing and compilation for printing.

(a). The following sheets have been sent to the War Office for printing during the year:-

1/50,000 - ~~34.27~~ Achake's (final sheet)

1/50,000 - ~~34.27~~ Mumia's (final sheet)

1/1,000,000 North A.37 (Provisional)

1/1,000,000 South A.37 (Provisional)

(b). Also the 1/10,000 maps of the North Kenya District and Coast strip Tana River have been reproduced locally.

(c). The 1/1,000,000 Africa International Series sheet North A.37 was compiled in East Africa from maps, sketches and traverses made by the topographical survey section, King's African Rifles officers, administrative officers and travellers. This information was fitted into a framework composed of the main Protectorate triangulation, Mr. Archer's Northern frontier triangulation, Major Lynn's Abyssinian boundary work and Captain Williams' traverse of Duba River.

The 1/1,000,000 Africa International Series South A.37 was partly supplied to the War Office from topographical work recently sent home, and was completed in East Africa with the latest geographical information obtainable.

(b). A map of the North Nyanza District was required in a hurry in order to lay out a scheme of farms for which there is a pressing demand.

The country was well suited for plane tabling and the work was done well and quickly.

The western portion of the Rumia's and part of the Kisumu-Kisii sheet sheet covered the low-lying country on the shores of Lake Victoria, and was hot and unhealthy, but on the whole easy to plane-table.

In the Kenya sheet the topographers were much delayed by fog on the slopes of the mountain; the country is also very broken and intricate. The impertinent curiosity of wild beasts further disturbed the work; the efforts of a rhinoceros and a buffalo being directed towards the destruction of a plane table, clinometer and lamp.

(c). The results of the topographical work are most satisfactory. The maps are thoroughly good and reliable, and a rapid rate of progress has been maintained. The average rate of work on scale 1/100,000 has been 6.0 square miles per day, and on scale 1/250,000 it had been 5.5 square miles per day.

influence of the miles, and in order not to alter the co-ordinates or points of the old work, on which a great deal of cadastral survey now depends, it was decided to throw the whole error into the new work, i.e. into a distance of 400 miles. In order to adjust this error it was necessary to make a correction in azimuth to the new series of -12.70° and a correction in scale of $+ \frac{1}{120,000}$.

Notwithstanding great scarcity of water and difficulties in obtaining supplies, the work was very rapidly and thoroughly done.

(c). The average triangular error for major work this year is .46 seconds. This is a distinct improvement on last year. The errors in the Lake and Coast triangulations are larger compared with those in the Highlands, but are still within desirable limits.

d. Topographical work.

a). The plane tablers were employed in the topographical survey of 500 square miles of farm land on scale 1/125,000 in the North Canterbury District. A provisional map on the same scale was made of the coast strip from Akaroa to Kington-in-the-Hawke's Bay. The offshore points have been surveyed on scale 1/125,000 in the Hawke's Bay sheet.

IVER.

The base (Fig. 25) was runned along a flat straight road in the East Africa Syndicate plantation on the Tana river, 6 measurements were made with invar tape, and gave a probable error of ± 106 , 000.

The base extension was long, and triangulation was carried over the adjacent country. This triangulation was connected to the main trigonometrical control north of Mombasa with great difficulty. The country, low undulating and bush covered, was very unsuitable for triangulation. And an exceptionally high flood of the Tana River this year rendered marching an amphibious performance. These difficulties were enhanced by exceedingly thick weather and a strong monsoon. However the observations were made successively on haligraphs when the bad weather conditions rendered the ordinary non-luminous beacons invisible.

Captain Coote and Lieutenant Maxwell carried out the reconnaissance, beaconing and conserving of the triangulation from Kisumu to the Rift Valley. This work was connected to the Anglo-German boundary triangulation at 5 points. It connects also the original work between Kisumu and the Rift Valley in a NW (northerly) direction. The errors found at the points of junction in the Rift Valley amount to 45 feet in latitude and 26 feet in longitude. This error is over a total distance

Trigonometrical work was carried out in the
country during the year over the following
areas:-

- (i) Western half of the North Kavirondo
District.
 - (ii) Small area to complete Basin Fishu trian-
gulation.
 - (iii) North Kenya District.
 - (iv) Coast Belt from Malindi to Tana River.
 - (v) Country lying between the Uganda Rail-
way and Anglo-Egyptian Boundary from
Lake Victoria to the Rift Valley.
- (vi). The total area covered by major trian-
gulation during the year amounted to 71,300
miles.

This output was slightly less than that
of the previous year.

The western half of the North Kavirondo
District was completed by Lieutenant Maxwell.
Conditions for observing were bad, owing to the
smoke and haze near the lake.

The country was extremely unhealthy.
The trigonometrical work in the North
Kavirondo District was carried out by Captain Williams.
The country is here in triangulation and with the
exception of some difficult parts.

Captain Fontham, assisted by Mr. G.
M. and General Turner, did the triangulation and
measuring of the coast work from Malindi to Tana
River. Captain Williams followed to assist in
the observing and in measuring a base on the
Tana.

SUPERINTENDENCE.

The Director of Surveyor General in the field for 12 months during the year. During 9 months he spent in major triangulation in the North Kinta District, 12 months in major triangulation on the Coast belt near the Tana River and 1 month on triangulation in connection with Isiobosa Island surveys. The remaining 1 months were spent inspecting cadastral surveys on the coast and in Baikipia.

TRIGONOMETRICAL AND TOPOGRAPHICAL BRANCH.

1. The Deputy Director (Captain Cook, R.E.) did not complete the work of the Banari boundary until 30th June; and Captain Kemphorne was on leave from 2nd November.

This amounted to the loss of the services of one officer for 8 months.

2. 2nd Corporal Thornton, R.E., was on leave for 6 months from March 1916 on termination of his tour of service.

Lance Corporal Bird, R.E., joined in October to 30th June the establishment. The Lance Corporal Bird was on the site till 2nd June 1916 for Isiobosa. Subsequently 3rd July and 3rd September.

On 29th the leaves of 1st & 3rd July had been held.

Note. -- = mess alluvance.

-- = travelling alluvance.

Checking of all private subdivisions and surveys
for registration purposes. Full Ordnance office preparation
and printing of cadastral plans required for optional use
and distribution to the public.

GENERAL.

The organization of the Service is as follows:-

(a) Administrative and Commissarial Branches.

The Director, with his Assistant Director and Commissary.

This branch, with the exception of the Assistant Director, who is on the permanent staff, is composed of officers and non-commissioned officers of the naval service. It is responsible for the administrative control in the Protectorate, and for the provision of the supplies, etc.

(b) Medical Branch. - Doctor Director, Assistant Directors, Surgeons, Surgeon Officers, Medical Officers, Druggists, Clinical Officers, Medical Staff, Surgeons, Druggists, here or elsewhere, and other members of the medical service to serve in the East Africa Protectorate; or their wives working in the country at present.

(c) The duties of the Naval Branch include the Civil Service, Commissaries, Government Agents, etc., the preparation and training of recruits, the fixing and location of posts, and the supply of stores, etc.

SURVEY

1882

Annual Report

Captain J. C. Williams, R.M.S.,
Director of Surveys

for the year ended March 31st, 1882.

BRITISH AFRICA PROTECTORATE.

GOVERNMENT HOUSE,
NAIROBI,
BRITISH EAST AFRICA.

No. 339.

April 9th, 1914.

16993

29 MAY 14

Sir,

Report

I have the honour to transmit herewith
the Annual Report of the Survey Department for
the year ending March 31st, 1914.

2. I am addressing a separate communication
to you respecting the arrears and the proposals
put forward for dealing with them.

I have the honour to be,

Sir,

Your humble, obedient servant,

H. Cowley, B.Sc.

GOVERNOR.

THE RIGHT HONOURABLE

LEWIS MARGOUCHE, P.C., M.P.,

SECRETARY OF STATE FOR THE COLONIES,

DOWNING STREET,

LONDON, S.W.
