of the jaws : a case report

Chindia, ML

Date: 1991

Abstract:

This article reviews the present clinical, radiographic and histologic features of fibrous dysplastic lesions of the jaws. A case is presented of an apparently reactivated fibrous dysplastic jaw lesion, with evidence of cystic degeneration, in a 33-year-old female school-teacher who was first seen at the Department of Dental Surgery, University of Nairobi in March 1986. The dilemma in the management of fibrous dysplasia is reviewed and discussed
