

## Construction Cost Monitoring System

Kamu, I. Karanja

Date: 1991

### **Abstract:**

The CCM as implemented is a cost accounting computer system for the many road construction projects undertaken by the Ministry of Public Works. It is user friendly, being forever form and/or menu driven. It has three main branches: data entry functions; general manipulation functions; and report producing functions. Also offers guided facilities for backing-up and restoring onto or from floppy diskettes.
