

NEW 128 SLICE CT SCANNER AT KNH

January 2015 Kenyatta National Hospital department of radiology, the main teaching facility for the Department of Diagnostic imaging and Radiation Medicine, UON, installed a new 128 slice CT scanner, a SOMATOM DEFINITION AS 128 SLICE by SIEMENS (pictured above). The equipment will allow for more detailed patient examinations than previously possible and significant reduction in patient radiation dose. This new acquisition, together with a new reporting room with 6 workstations (pictured below) will also allow for greater opportunities for training radiology residents due to increased scope of examinations and better work flow.
